Overview

ABB offers a comprehensive range of scalable PLCs and robust HMI control panels. Since its launch, the AC500 PLC platform has achieved significant industry recognition for delivering high performance, quality and reliability.

Comprehensive range

- ABB delivers scalable, flexible and efficient ranges of automation components to fulfill all conceivable requirements of the most diverse automation applications.
- ABB's automation devices deliver solutions with high performance and flexibility to be effectively deployed within various industries and applications including water, building infrastructure, data centers, renewable energy, machinery automation, material handling, marine and many more.

Engineering suite

- ABB Ability[™] Automation Builder is the integrated software suite for machine builders and system integrators requiring state-of-the-art productive machine and system automation.
- Combining the tools required for configuring, programming, debugging and maintaining automation projects from one common intuitive interface, Automation Builder addresses the largest single cost element of most of today's industrial automation projects - software.

Programmable Logic Controllers PLCs

- The AC500-eCo, AC500, AC500-XC and AC500-S scalable PLC ranges provide solutions for small, medium and high-end applications.
- Our AC500 PLC platform offers different performance levels and is the ideal choice for high availability, extreme environments, condition monitoring, motion control or safety solutions.
- Our AC500 PLC platform offers interoperability and compatibility in hardware and software from compact PLCs up to high end and safety PLCs.

Control panels

- CP600-eCo, CP600 and CP600-Pro control panels in combination with the PB610 Panel Builder 600 offer a wide range of features and functionalities for maximum operability.
- ABB control panels are distinguished by their robustness and easy usability, providing all the relevant information from production plants and machines at one single touch.

Overview

Engineering suite

ABB Ability™ Automation Builder

- Connects the engineering tools for PLC, safety, control panels, drives and motion.
- Combines the tools required for configuring, programming, debugging and maintaining automation projects from one common intuitive interface.

Library packages

- For efficient engineering of demanding applications.
- Easy-to-use application examples.

Visualization

CP600-eCo

 Economical control panel aimed for standard functions and high usability for clear interaction with the operation process.

Programmable Logic Controllers PLCs

AC500-eCo

- Compact PLC for economical automation solutions in smaller applications.
- Integrates seamlessly into the broader AC500 PLC platform.

I/O modules

S500-eCo

- Range of modular I/Os for economical configurations in smaller applications.
- Connected directly to the AC500 or AC500-eCo CPU modules.
- S500-eCo I/O modules can be mixed with standard S500 modules.
- Usage as remote I/O with fieldbus communication interface modules.

CP600

 Robust HMI with high visualization performance, versatile communication and representative design for machines and systems.

CP600-Pro

HMI with high end visualization performance, multi-touch operation, versatile communication and representative design, partly usable to trigger safety actions with AC500-S.

AC500

- Powerful PLC featuring a wide range of performance, communications and I/O capabilities for industrial applications.
- For complex, high-speed machinery and networking solutions.

AC500-XC

- Extreme condition PLC variant.
- With extended operating temperature, immunity to vibration and hazardous gases, use at high altitudes and in humid environments.

AC500-S

- Integrated safety PLC (SIL3, PL e) for safety applications in factory, machinery or process automation area.
- $\bullet\,$ For simple and complex safety solutions.

S500

- Range of modular I/O with protected outputs and comprehensive diagnosis, covering a wide range of signal types.
- Installed as remote I/O with a communication interface module or directly connected to the AC500 CPU.
- Support of different fieldbuses to use the S500 I/O modules with PLCs from different manufacturers.

S500-XC

- Extreme condition \$500 I/O variant.

 With automoded a postion to reach the second of the second
- With extended operating temperature, immunity to vibration and hazardous gases, use at high altitudes and in humid environments.

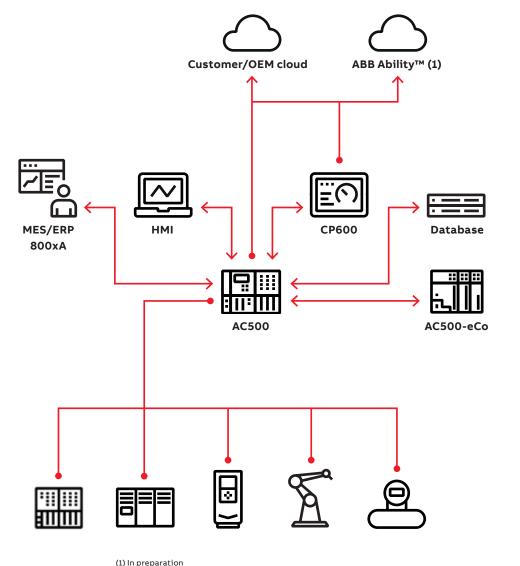

S500-S

- Safety S500 I/O variant.
- Extreme condition variants available.

Connectivity

ABB's PLC and control panel portfolio provides a high number of scalable products, communication protocols and connectivity options, from the field layer right through to the management and visualization layers.

IT network/Internet

- FTP(S)
- HTTP(S)
- MQTT
- OPC UA
- SNTP

Factory/site network

- BACnet
- FTP(S)
- HTTP(S)
- IEC 60870-5-104
- IEC 61850
- KNX
- MySQL/MSSQL
- OPC DA/AE
- OPC UA
- SNMP
- SNTP
- TCP/IP
- UDP

Control network

- CANopen
- CAN 2A/2B
- EtherCAT
- Ethernet/IP (1)
- IEC 60870-5-104
- IEC 61850
- Modbus RTU
- Modbus TCP
- PROFIBUS DP
- PROFINET/PROFIsafe
- SAE J1939

| Protocol | Application |
|------------------------------|--|
| Connector to SQL Database | Save to or get data from MSSQL or MySQL databases |
| FTP(S) | Server and client for secure and efficient exchange of big data |
| HTTP Request | Request information like temperature, humidity etc. from devices with web server functionality |
| HTTP(S) | Publish HTML5 websites for monitoring and control |
| IEC 60870-5-104 | Telecontrol in distributed plants such as water, solar, power infrastructure (control- and substation) |
| IEC 61850 | Mainly used in the electrification part of infrastructure projects |
| KNX/BACnet | Standard protocols used in building and infrastructure automation projects |
| MQTT | Certificated based publishing of data to private clouds for dashboards or data analytics |
| OPC DA/AE/UA | Connectivity for SCADA, DCS and management applications |
| SNTP/SNMP | Protocol for time synchronization, network supervision and configuration |
| UDP and TCP/IP | Implement specific and efficient own communication |

ABB Ability™ Automation Builder

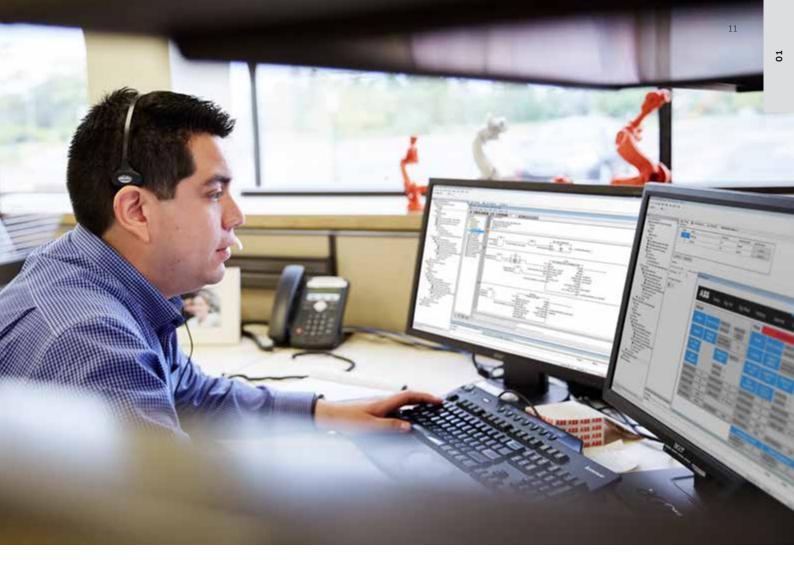

Engineering productivity for machine builders and system integrators.

Discover engineering productivity when designing your automation solutions

Automation Builder is ABB's integrated programming, simulation, commissioning and maintenance environment for PLCs, safety, drives, motion, control panels and SCADA. Automation Builder combines the proven ABB tools Drive Manager, Drive composer pro, Mint WorkBench, Panel Builder and ABB zenon.

Always get the right scope of Automation Builder for your automation solutions

One single software installer helps you to create and maintain your personal Automation Builder configuration - either on your PC or on a server. Any changes or updates are just a matter of a few mouse clicks.

The Automation Builder licensing system is designed for supporting most operation scenarios. Licenses can be installed on PCs, USB dongles or license servers. In case of changes in the organization or in the engineering workflows the licenses can easily be transferred to where you need them.

Next level engineering efficiency

Improve your engineering efficiency by maximizing data re-use. Data that is available from third party tools can be imported or synchronized, either via dedicated interfaces or generic Excel sheets. Configurations that have been created for the PLC can automatically be re-used e.g. for the configuration of drives or operator panels.

Engineering efforts can be reduced further by using easy-to-use libraries e.g. for wind, water, solar, drives, motion, robotics, safety and building automation applications. And in case building blocks are missing for your automation solution simply create them yourself. Project scripting allows you to automate the creation of any part of your configuration or application.

The quality of the resulting PLC application can be automatically checked by static code analysis. More than 100 pre-defined rules can be used to define and keep the quality level that is required for your business.

ABB Ability™ Automation Builder

Fast track to comprehensive applications

For creating the application code all five IEC 61131-3 languages can be used. This opens up access to a large community of developers sharing proven code snipets. Even existing PC based functions or protocols can be re-used by using the C/C++ integration. Furthermore, Simulink models and MATLAB functions can be used as well by converting them to PLC code.

Minimized efforts for project code and data administration

Configure and program all devices of your automation solution in one single project. This makes it easy to share your solutions with others. For more advanced usage the integrated version control system supports further scenarios like multi-user engineering or product line management.

Managing the life-cycle of your automation solutions is also easy. The annual Automation Builder release also supplies you with the latest versions of device firmware. The decision, whether to use the latest firmware with the latest feature set or to keep the current firmware with the current feature set can be made for each project and independent of the installed Automation Builder version.

Speeding up during commissioning and maintenance

Whenever there is an issue in the automation system, it is required to quickly and efficiently fix it. Automation Builder supports this by a generic three-step approach:

- General diagnosis provides a traffic light view on devices and (sub)systems.
- Detailed diagnosis provides detailed information e.g. about the source and the type of the issue.
- Extended diagnosis is available for some subsystems such as fieldbuses and offers advanced commissioning functions such as comparing connected vs. configured devices or manual control of bus states.

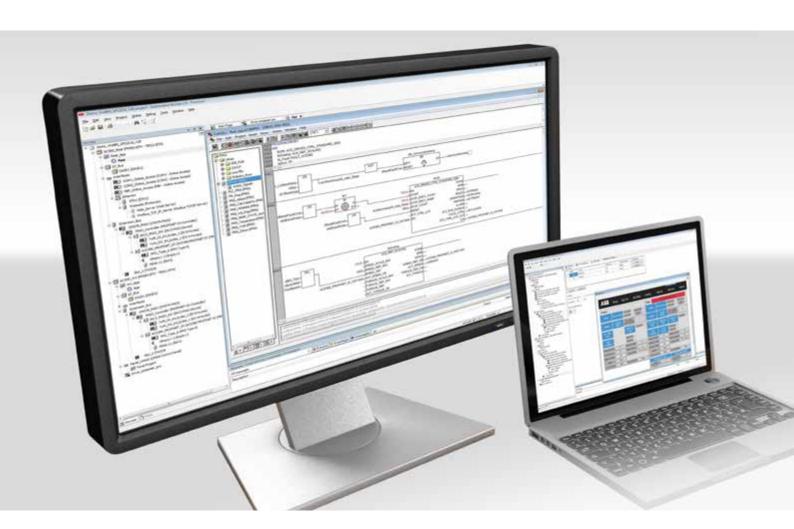

The diagnosis information is accessible not only via Automation Builder, but also via the AC500 display, the PLC application or operator panels.

Easily create a connected world

Connectivity can be achieved in multiple ways. Different cloud protocols like MQTT or OPC UA are deeply integrated into ABB AC500 PLCs. For advanced connectivity needs the integration with CP600 operator panels or even with the ABB zenon software can be used for further processing and transmission of any data. Setting up the interfaces and sharing the data is not much more than a single click in Automation Builder.

Advanced simulation – a game changer in engineering

Simulate all kinds of applications with minimum effort. Test the complete system seamlessly before involving real hardware. Even complex systems can be built up efficiently, ensuring smooth interaction of all components and operator training at an early stage.

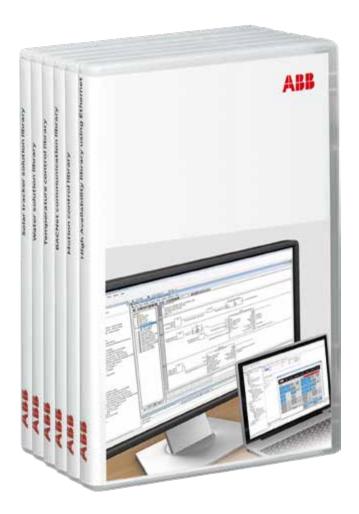

Download Automation Builder from

www.abb.com/automationbuilder Familiarize yourself with Automation Builder using the 30-day test license.

AC500 libraries and software

A good investment for system integrators and end-users, AC500 libraries and software improve stability while reducing warranty costs and service. Library and software packages contain functions or protocols and easy-to-use examples for minimal programming effort and quick implementation of complex and demanding applications.

AC500 libraries and software deliver the seamless integration of PLCs, drives and HMI required to build and commission automation solutions quickly and easily. AC500 libraries and software by ABB are maintained to ensure that your programs can also be used with less risk.

Solar library

Library package for solar trackers increasing energy efficiency, providing quick commissioning and excellent positioning accuracy.

Water library

Library package with energy efficiency functionalities offering quick commissioning of water applications, such as pump stations with remote communication.

Temperature control library

Library package for the advanced PID temperature control of demanding applications, for example extrusion.

HA-CS31 library

Library package adds high availability system functionality for redundant hot standby over serial CS-31 bus.

Drive integration library

Library package for the quick integration of ABB ACS drives using different fieldbusses.

Motion control library

Library package for decentral, central and coordinated motion according to the PLCopen standard.

BACnet library

Library package adds BACnet-ASC device profile for communication to BMS Building Management Systems in larger infrastructure projects.

HA-Modbus TCP library

Library package adds High Availability System functionality for redundant hot standby over Ethernet field network via Modbus TCP.

KNX protocol

Engineering and protocol package which seamlessly integrates ETS and Automation Builder.

61850 protocol

Adds engineering tool and library for 61850 Ed.1 MMS Server and GOOSE publish and subscribe functionalities.

PCO library

Contains process control function blocks for integration of AC500 as controller in a DCS solution. For ABB Ability™ System 800xA an object library is available which provides matching symbols and faceplates.

PLCs at a glance...

AC500 Programmable Logic Controllers with scalable, state-of-the-art technology for better performance.

Standard industrial communication fieldbus, network and protocols supported by the 'One Platform' solution make the AC500 the perfect automation solution in even the most demanding

environments. Flexible and scalable superior CPUs deliver performance whenever and wherever you need it.

Secure cloud connectivity options

One programming tool for the entire AC500 PLC platform

Scalable and flexible range of products, with various communication protocol and connectivity options

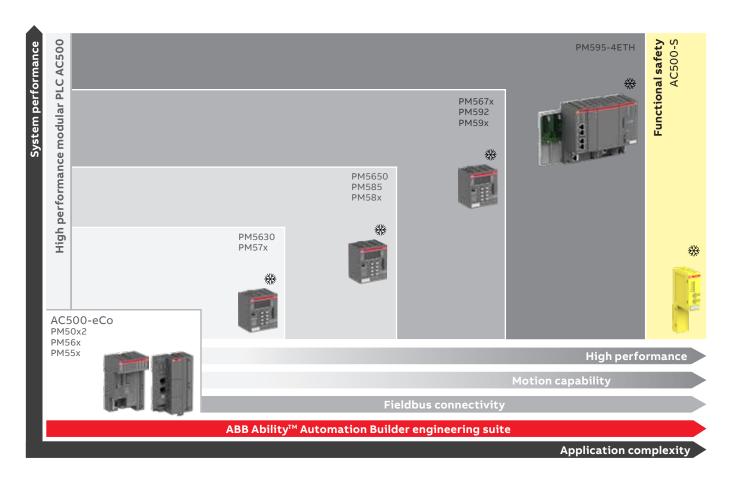

Reliable, secure and safe with different performance levels

The ideal choice for high availability, extreme environments, condition monitoring, motion control or safety solutions

fully

- (1) Requires Library PS552-MC-E
- (2) AC500-S and AC500-S-XC require AC500 or AC500-XC modules to operate. The latter supports all communication interfaces.
- (3) Requires new V3 Library PS5611-MC
- (4) Licensed features, runtime license per CPU.
- (5) In preparation(6) PM595 and/or CPU V3 only
- (7) Application library download from 'application examples"
- (8) Memory size is complete size for program, data and web server with AC500 V3 CPU, thereof size of User data and User program is smaller
- (9) As of PM585-ETH
- (10) Mounted on Hot Swap terminal unit when attached to AC500 CPU V2 as of PM585-ETH or AC500 CPU V3 or communication interface modules for Modbus TCP, PROFINET (CI501-PNIO, CI502-PNIO) or PROFIBUS.
- (11) Only Standard PM5052 or Pro PM5072 versions
- (12) Memory size of V2 versus V3 CPUs is not comparable. Projects have a different and separate User Program code and Data memory calculation in Automation Builder 2.4.0 version or later: System, configuration and web server parts are not counted anymore. This results in typically about 50% lower memory usage compared to V2, and even lower memory usage compared to V3 $\,$ projects compiled in Automation Builder 2.3.0 or before.

AC500 CPU Selector

Your requirements

You are looking for a well established PLC solution with large product range for all kind of applications. You need particularly:

- Support of CS31 serial interface communication and High Availabilty solution with fast switching time
- Condition Monitoring capability
- Support of various types of communication protocols like PROFIBUS DP, CANopen, PROFINET, EtherCAT or serial interface protocols
- IoT connection with MQTT support
- Safety applications with support of PROFIsafe communication (F-Host and F-Device)
- PLC integration into System 800xA DCS communication

Application specification and performance needs Cost-effective application

AC500 V3 CPU Selector

Your requirements

You are looking for a well established PLC solution with a large product range for extended features and large communication capability. You need particularly:

- · Large memory and computing performance for your application
- High Ethernet capability with secured communication and support of communication network with extensive Modbus TCP communication
- IoT connection with MQTT support and OPC UA server
- Very efficient web visualization with HTML5 support
- Safety applications with local or decentralized I/O on PROFINET/PROFIsafe
- Fast coordinated motion capability from small to large CPU with embedded motion I/O or Ether CAT support

Application specification and performance needs

Extremely Cost-effect cost-sensitive application simple • with comp application number of

- (2) Total memory for code, data and web server with AC500 V3 CPU, thereof size of User data and User program is smaller and dynamically allocated
- (3) Number of ETH Socket total is basically not limited, but depends on: CPU load, priority of application tasks, kind of used protocols, amount of data transfered, network structure
- (4) Feature(s) is (are) licensed, runtime license per CPU.
 (5) Memory size of V2 versus V3 CPUs is not comparable. Projects have a different and separate User Program code and Data memory calculation in Automation Builder 2.4.0 version or later: System, configuration and web server parts are not counted anymore. This results in typically about 50% lower memory usage compared to V2, and even lower memory usage compared to V3 projects compiled in Automation Builder 2.3.0 or before.

AC500-eCo – modular concept

01 - AC500-eCo central processing unit (CPU)

- · Different memory options
- Different CPU types and performances
- Integrated communication option
- Onboard I/O extension using option board slots of AC500-eCo V3 CPU
- Ethernet-based communication.

02 - S500-eCo I/O modules

- Up to 10 modules
- Decentralized extension available.

03 - Terminal blocks

- Three types of pluggable terminal blocks available for AC500-eCo V2 and S500-eCo I/O modules
- Two types of terminal block sets for AC500-eCo V3.

AC500 and AC500-XC - modular concept

01 - Terminal base

- Common for all AC500 V2 CPU types
- ullet For 1, 2 or 4 communication modules
- · With serial interfaces
- With 1 or 2 Ethernet interfaces
- New specific terminal base only for AC500 V3 CPU with 0, 1, 2, 4 and 6 communication modules.

02 - Communication modules

- For PROFIBUS DP, Ethernet, Modbus TCP, EtherCAT, CANopen, PROFINET IO or serial programmable
- Up to 4 pluggable
- Up to 6 pluggable for AC500 V3 CPU
- Support of AC500-S safety solution.

03 - AC500 central processing unit (CPU)

- Different performance, memory, network, operating conditions options
- Integrated communication
- New AC500 V3 CPU with large memory and high performance (requires new specific terminal base).

04 - S500 I/O modules

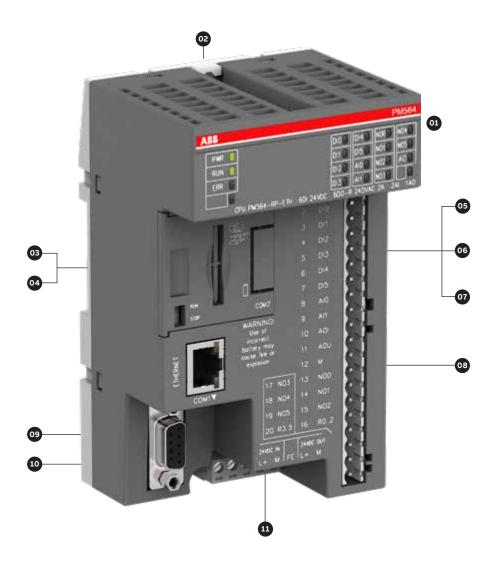

- Up to 10 modules
- Decentralized extension available
- Hot swap I/Os local or decentralized on PROFINET IO and additionally PROFIBUS DP for V2.

05 - Terminal units

- Up to 10 terminal units
- · Decentralized extension available.

AC500-eCo system characteristics

Locally, AC500-eCo CPUs can be extended with up to 10 I/O modules. AC500-eCo CPUs with different performance levels are available.

01 AC500-eCo CPUs are locally extendable with up to 10 I/O modules (standard S500 and S500-eCo I/O modules can be mixed).

AC500-eCo V3 overview

More AC500-eCo features but the same footprint

01

BASIC

STANDARD

PRO

Basic

Basic and compact applications

- For extremely cost-sensitive and simple applications
- Few I/O channels only
- Ethernet communication
- Easy onboard extension with one option board, no I/O-bus
- Adequate performance
- Benefits from the ABB Ability[™]
 Automation Builder software
 platform

Standard

For modular and distributed applications

- Powerful processor with integrated Floating Point Unit for fast calculation
- Ethernet interface on all the products for all-purpose communication (e.g. Modbus TCP, Ethernet/IP (1) (2))
- Web server with HTML5 web visualization
- IoT-enabled with OPC UA server
- MQTT protocol
- High modularity with up to 3 option boards for I/O extension and communication
- High-speed onboard I/Os with simple motion capability
- Larger number of I/Os with modular extension
- Reuse of existing S500/S500-eCo I/O modules

Pro

For demanding logic, motion and IoT-ready applications

- Powerful CPU for communication, gateway to IoT applications or motion control
- Larger memory for big applications and web capability
- 2 independent Ethernet interfaces with switch function
- A variety of Ethernet-based protocols
 - For building applications (KNX (1)/BACnet (1)(2))
 - Telecontrol (IEC 60870-5-104)
 - Energy management (IEC 61850 (1))
 - Motion control (EtherCAT (1)(2))
 - SCADA connection
- Coordinated motion with PLCopen library (1)(2) and EtherCAT (1)(2)

AC500 PM595 controller system characteristics

The flagship of the AC500 platform, the AC500 PM595 controller, was designed to be as scalable, flexible and efficient as the entire AC500 range.

With the AC500 CPU PM595, ABB launched a new core for machine control applications. Its high-performance processor with generous memory offers performance, security and reliability for the upcoming challenges of automation applications.

A variety of connectivity capabilities, integrated safety and utilizability even under rough environment provide machine builders with valuable benefits when performing their automation tasks.

Condition monitoring system CMS based on AC500

Predictable performance for your operations

Optimize your assets with a condition monitoring system (CMS) based on the proven AC500 platform. The FM502 module can help you to improve your operations resulting in greater efficiency and higher reliability while minimizing service and operating costs.

01 Terminal base: TF501 or TF521

02 Accomodating: 0 - 2 communication modules

03 PM592 CPU

04 FM502 CMS module

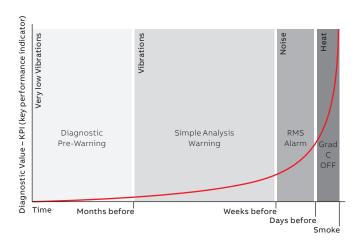

05 Extendable by I/O terminal units

06 Extendable by further I/O modules

Add predictable performance and productivity

The CMS module brings further reliability and easy integration with all kinds of machinery systems, enabling precise management of the real-time condition of your operation. This transparency takes your business and productivity to a new level with more efficient machines, predictable performance and significant reduction in maintenance costs.

No matter whether as stand-alone condition monitoring or integrated into machine or process control, the module is perfectly suited to build optimized, self-analyzing automation solutions that simultaneously perform condition monitoring, control, protection, safety and data logger functions with one controller. The fast data logger function also contributes to consistent high quality production, due to the possibility to combine control and production information directly.

CMS also protects against machine failures, unforeseen sudden damage, incorrect installation, and reduces maintenance and wear. Virtually no unscheduled downtimes boost plant availability and reliability.

Advantages

- Planned maintenance rather than spontaneous repair ensures predictable performance
- · Approaching damage is identified very early
- Protection against spontaneous failures and operation in critical conditions
- Reduction of costs in maintenance and lost production time
- · Plant availability is increased
- Optimum utilization of the aggregates until real end of life
- · Simple to use, maintain, adapt or extend

AC500 + CMS = increased machine efficiency

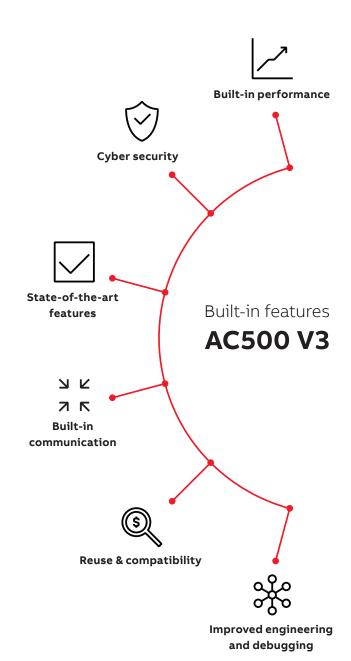

All based on the AC500 platform modularity provides ultimate flexibility: Communication and I/O modules can be added and combined with Safety.

Extendable, robust and proven

- Stand-alone CMS or control integrated
- Can be extended by AC500 communication modules and S500 I/O modules
- Proven and future proof, as based on AC500 platform
- Extreme conditions XC version available
- Fast data logger, e. g. for production quality
- Condition monitoring and fast protection (vibration, current, voltage, speed/encoder)

AC500 V3 enhanced connectivity and performance

The new V3 features provide even more flexibility and freedom when it comes to connectivity and functions supplied onboard without the need of additional devices as couplers or switches. AC500 V3 is ready for the requirements of IoT and digitalization and secure cloud connectivity via new protocols and functions.

Built-in performance

- Faster CPUs with more powerful processors
- · More CPU memory allocated freely
- Modern, state-of-the-art components

Cyber security

- Digitally signed firmware updates protected by hardware security chip
- Secure communication protocols: HTTPS, FTPS, OPC UA, MQTT
- Encrypted communication with engineering system ABB Ability[™] Automation Builder and boot application

State-of-the-art features

- OPC UA for easy connectivity to SCADA systems or operator panels
- · MQTT for lightweight cloud messaging
- Onboard HTML5 web server technology
- Functional safety support with PROFIsafe communication

Built-in communication

- Two Ethernet interfaces for use as switch or independent ports
- Onboard Ethernet protocol as Ethernet/IP*
- CANopen master interface, CAN2A/2B, J1939
- KNX and BACnet
- OPC UA server, OPC DA alarm and event
- IEC 61850
- IEC 60870-5-104 Telecontrol

Reuse & compatibility

- Reuse with AC500 platform:
 - S500/S500-eCo I/O modules
 - Communication modules
- Project conversion and code re-use

Improved engineering and debugging

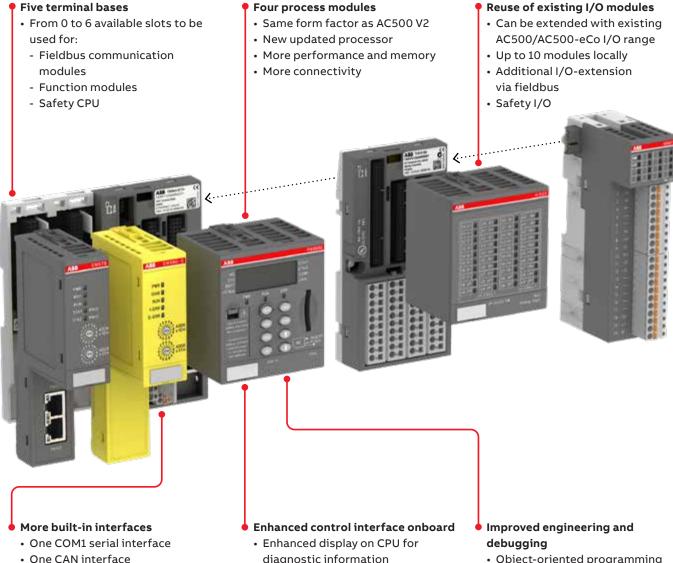

- Professional version control with subversion
- · Application project management
- Object-oriented programming
- Optimized IEC 61131-3 editors
- · Offline simulation capabilities*

^{*} In preparation

01

The flexibility, scalability and footprint of AC500 V2 have been passed on to the new CPU range. Therefore, AC500 continues to be the perfect fit for various applications or will be the natural

successor when you need to introduce new features to existing applications or extend machines and applications to reach for the cloud.

- Two Ethernet interfaces to be used as:
 - Switch
 - 2 port independent
 - Licensed protocol

- diagnostic information
 - Settings can be made without software
- IP and COM addresses change
- Indicating the status of High Availability CPUs
- Control buttons to operate the CPU
- Object-oriented programming
- · New optimized editors for IEC 61131-3
- Integrated HTML5 web server

AC500 extreme conditions

AC500-XC – the rugged variant of AC500 for extreme indoor and outdoor conditions.

The PLC AC500-XC is reliable, functionally safe and operational even under rough environmental conditions.

02 Extreme conditions communication module

03 Extreme conditions CPU

04 Extreme conditions CPU with integrated connectivity and terminal base

05 Extreme conditions S500 terminal unit

06 Extreme conditions S500 I/O module

Operation in extremely humid environments

 Increased resistance against 100 % humidity and condensation.

Reliable in high altitudes

• Operation in altitudes up to 4000 m above sea level or air pressures up to 620 hPa.

Extended immunity to vibration

- 4 g rms random vibration up to 500 Hz
- 2 g sinusoidal vibration up to 500 Hz.

Extended operating temperature

- -40 °C up to +70 °C operating temperature.

Extended immunity to corrosive gases and salt mist

- G3, 3C2 / 3C3 immunity
- Salt mist EN 60068-2-52 / EN 60068-2-11.

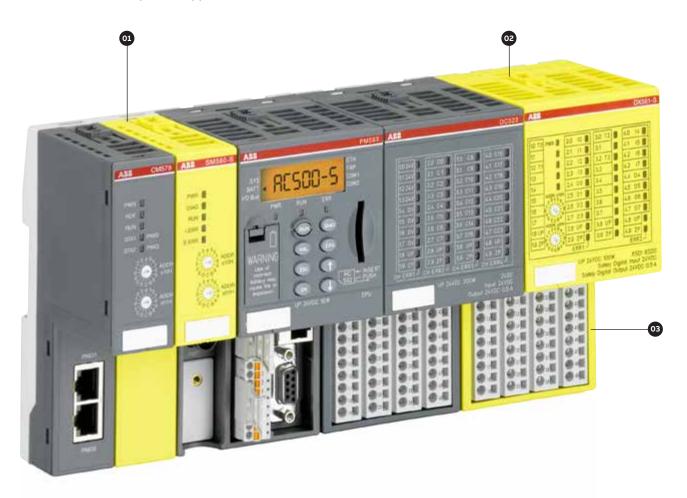

Extended EMC requirements

- EN 61000-4-5 surge immunity test
- EN 61000-4-4 transient / burst immunity test.

AC500-S safety PLC – functional safety

AC500-S safety PLC is the solution for both simple and complex machine and process safety applications requiring maximum reliability, efficiency and flexibility.

This safety PLC protects people, machines and processes, the environment and investments – the ideal choice for hoist, wind turbine, crane, material handling, robot and other factory and process applications.

01

01 Safety CPU

02 S500 Safety I/O module

— 03 Safety terminal unit

Better integration and ease of programming

Featuring a consistent look and feel across the entire range, the AC500 is the PLC of choice for applications where uncompromised flexibility, comprehensive integration and seamless communication are a must.

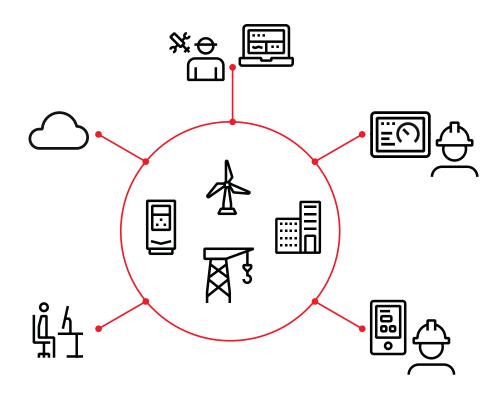

ABB Ability™ Automation Builder seamlessly integrates your safety application in ABB PLC, Safety, Drives, Motion and HMI. Through integrated standard languages, such as IEC 61131-3, Automation Builder is easy to use, thus, allowing you to get started in virtually no time at all. And what is more: intuitive system configuration using one single tool ensures optimal transparency.

The AC500-S safety PLC facilitates the implementation of even most complex safety applications. Support of safety-relevant calculations, such as COS, SIN, TAN, ASIN, ACOS and LOG makes the AC500-S the ideal solution for crane engineering, wind power generation, robotics and hoisting applications.

Safety programming with Structured Text (ST) and full support for Function Block Diagram (FBD) and Ladder Diagram (LD) programming and advanced features in PROFIsafe over PROFINET communication, like Shared Device functions, gives you greater flexibility and simplifies safety application development. The AC500-S safety PLC is also available in a version for extreme conditions.

Visualization options

PB610 Panel Builder 600 in combination with the CP600 HMI platform provides flexible possibilities for visualization.

Your interface to the application

Whether you prefer to use your smart device anywhere, stand in front of a control panel at your application or want to inform yourself about an installation abroad e.g. via the cloud: CP600 platform control panels with PB610 Panel Builder 600 provide you with the free selection of how to get the information you need, let you operate your application easily and support the effective analysis of your processes.

Tailor-made for easy, intuitive operation

PB610 Panel Builder 600 supports the design of easy to use and reliable to operate graphical user interfaces for all control panels of the CP600 platform, mobile smart devices and notebooks. Standardized faceplates are easily realized by means of so called custom widgets and structured tags.

User management and cyber security

Configuration of users and user groups allows to define access rights and permissions for and from different devices and media according to your needs. Devices and software are regularly tested accordant latest known possible vulnerabilities.

Web panels

CP600 control panels with PB610 provide web servers for HTML5 based visualization on various users' devices. The majority of the control panels comes with a browser for using them for

- visualization of AC500 web server (V3)
- nearly unlimitted information through general web access
- easy combination of PB610 user interface with information from the web.

Mobile / remote access to HMI

HTML5 based graphical user interfaces enable remote access and operation via mobile devices like smartphones, tablets etc.

PB610 Panel Builder 600

Engineering tool for easy design of tailor-made graphical user interfaces for the entire CP600 platform

PB610 Panel Builder 600 software is integrated in the ABB Ability™ Automation Builder engineering suite and can be downloaded via Automation Builder installer.

Tailor-made human machine interface (HMI)

- For the efficient design of flexible HMI applications in versatile automation solutions.
- Vector graphics (*.SVG) for precise, easily scalable and dynamic HMI design.
- Alpha blending for realistic transparency effects.

- Libraries including rich sets of widgets readyto-use graphical objects.
- Easy creation of customized widgets through the combination/modification of standard widgets.
- Customized widgets clearly arranged in user galleries.
- · Page templates for professional design.
- Numerous configuration options for all HMI elements
- Realization of customized functions and individual dynamic manipulation via Java Script with debugger.
- Easy data acquisition and trend presentation.
- Reliable user management and secure access control.
- Rich set of configurable features: dynamic objects, data acquisition, alarm handling, multilanguage applications, recipes, ...
- HMI simulation for efficient commissioning.
- Numerous drivers for easy connection to e.g. PLCs, drives, robots.
- OPC UA client and server for future-orientated cloud connectivity and IoT.
- Gateway function for easy data exchange between different protocols and systems.

PLC Automation product family

CP600 control panels platform at a glance ...

With comprehensive but easy-to-use functionalities, ABB control panels stand out from competitor products. At one single touch, they intuitively provide operators with tailor-made operational information for production plants and machines. CP600-eCo, CP600 and CP600-Pro control panels make machine operation efficient, predictable and user-friendly.

New comprehensive CP600 control panels platform for different applications

CP600-eCo, CP600, CP600-Pro

Wide range of control panel offerings in three assortments. Ideal choice for visualization of AC500 PLC platform automation solution.

The economical CP600-eCo control panel is aimed for standard functions and high usability for clear interaction with the operation process.

The robust CP600 HMI provides state-of-the-art performance, versatile communication and representative design for machines and systems.

The CP600-Pro HMI comes with high end visualization performance, multi-touch operation, versatile trendsetting communication and representative design.

Due to the good scalability between CP600-eCo, CP600 and CP600-Pro, CP600-eCo HMI applications can be re-used easily for CP600 or CP600-Pro control panels and vice versa.

PB610 Panel Builder 600 is the engineering tool for the entire CP600 control panels platform.
PB610 Panel Builder 600 software is integrated in the ABB Ability™ Automation Builder engineering suite. For integration into a couple of third party automation systems, drivers are available. OPC UA client and server support future-orientated communication solutions.

PLC Automation product family

CP600-eCo control panels

Economic HMI range for basic applications

Control panels in three different screen sizes from 4.3" to 10.1" in ABB design or just black provide HMI functions typically required for basic applications. The engineering tool PB610 Panel Builder 600, part of Automation Builder, ensures easy scalability on the CP600 platform.

Designed for basic applications

- The widescreens available in 4.3", 7" and 10.1" are suitable for many applications.
- Protocols for ABB PLCs, machinery and motion drives for Ethernet and serial connection make these control panels first choice for ABB automation solutions.
- OPC UA client and server functions make them well prepared for future communication solutions.
- Engineering by means of PB610 Panel Builder 600, part of Automation Builder, facilitates integration into automation packages and enables good scalability on the CP600 platform for different applications.

Slim industrial design

The slim plastic enclosure in attractive industrial design with a mounting depth of 29 mm enables installation even in narrow spaces. All connectors are located on one side. Landscape and portrait mounting options provide installation flexibility and various HMI presentations. These devices are available either in ABB design or in black.

State-of-the-art connectivity

- Ethernet interface 10/100 Mbit for easy connectivity to ABB automation components.
- Flexible serial connectivity to automation components without Ethernet interface.
- USB host for flexible data storage and easy updating.

The CP600 platform is many customers' first choice for their individual visualization projects.

CP600 control panels

State-of-the-art HMI range for diverse applications

The CP600 control panels in screen sizes of 7", 10.4" and 15" provide comprehensive HMI functions for a wide range of applications. The engineering tool PB610 Panel Builder 600, part of Automation Builder, ensures easy scalability on the CP600 platform. Same front dimensions, cutouts and screen resolutions support an easy replacement of former CP600 control panels.

Tailor-made for your needs

- Three different screen sizes with standard aspect ratio or widescreen from 7" to 15" are suitable for a lot of different applications.
- Protocols for ABB PLCs, machinery and motion drives for Ethernet and serial connection make these control panels first choice for ABB automation solutions. The IRC5 protocol enables easy direct communication with ABB robot controllers.
- OPC UA client and server functions make them well prepared for future communication solutions.
- Integrated chromium browser usable e.g. for AC500 V3 web visualization

 Engineering by means of PB610 Panel Builder 600, part of Automation Builder, facilitates integration into automation packages and enables good scalability of the CP600 platform for various applications.

Solid design, wide operating temperature range

The robust aluminum enclosure in attractive industrial design, providing all connectors on one side, enables installation in various environments. Wide operating temperature range from -20 up to +60 °C makes these panels suitable for even challenging environments. Landscape and portrait mounting options provide installation flexibility and various HMI presentations.

Various options for flexible connectivity and data storage

- 2 Ethernet interfaces 10/100 Mbit with configurable bridge mode for easy connectivity with ABB automation components.
- Flexible serial connectivity with automation components without Ethernet interface.
- USB hosts for the flexible connection of accessories or data storage and easy updating.
- Memory card slot for easy data storage and updating.

CP600 control panels are your interface to the application.

Benefits of the new CP600 generation

- Increased performance for applications of up to 150 MB
- Improved network capabilities: 2x ETH with different physical layers (PHY)
- Extended operating temperature: -20...+60 °C
- Increased brightness: 400 cd/m²
- Black, neutral front foils suitable for most applications

- Enhanced features
- Three most requested screen sizes: 7", 10.4"
- Easy replacement of former CP600 devices

CP600-Pro control panels

Outstanding HMI range designed for challenging applications

Control panels in screen sizes from 5" to 21.5" provide comprehensive HMI functions with multitouch operation for a wide range of applications. Real glass fronts and an increased operating temperature range of -20...+60 °C make them first choice even for harsh environments. The engineering tool PB610 Panel Builder 600, part of ABB Ability™ Automation Builder, ensures easy scalability on the CP600 platform.

Multi-touch control panels for high-end applications

- The portfolio includes five screen sizes from 5" to 21.5", all widescreen, with multi-touch real glass screens for demanding high-end applications.
- The wide range of operating temperatures of -20...+60 °C makes them suitable for versatile applications and first choice for demanding
- Protocols for ABB PLCs, machinery and motion drives for Ethernet and serial connection make these control panels preferred option for ABB automation solutions.
- OPC UA client and server functions make them well prepared for future communication solutions.

 Engineering by means of PB610 Panel Builder 600, part of Automation Builder, facilitates integration into automation packages and enables good scalability on the CP600 platform for versatile applications.

Real glass front and solid aluminum enclosure

CP600-Pro control panels have real glass fronts and robust aluminum enclosures in attractive industrial design, with all connectors located on one side, for installation in various even demanding environments. Landscape and portrait mounting options support installation flexibility for various HMI presentations.

Flexible connectivity and data storage with a view to the future

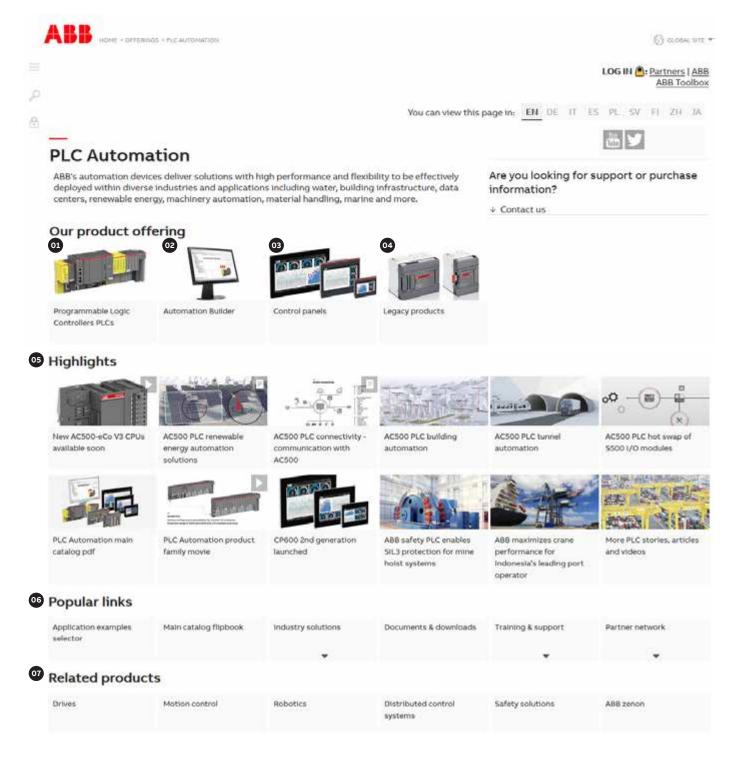

- Up to 3 Ethernet networks with different physical layers for easy connectivity to ABB automation components for upcoming networking concepts.
- Flexible serial connectivity to automation components without Ethernet interface.
- USB hosts for connecting printers and accessories, data storage and updating.
- Memory card slot for easy data storage and updating.

The CP600-Pro control panels (7"... 15") can also be used to trigger safety actions in combination with AC500-S.

Key features

Stay in control of your project:
Automation Builder integrates engineering tools
for PLCs, safety, drives, motion and control
panels

Reduce risk: Manage complexity and realize connectivity easily

— Increase efficiency:
Build comprehensive solutions with integrated engineering that add value to your business

— Combine tools: One common

intuitive interface for configuring,

programming, debugging and maintaining automation projects

Save time: Test systems effortlessly in virtual time without real hardware using advanced simulation support

Ordering data

Automation Builder

- Automation Builder connects the engineering tools for PLC, safety, drives, motion and control panels. The software suite integrates products into solutions that create value for your customers, giving you greater control of your projects, reducing risk and saving time.
- Open systems win. They lead to more innovation, value and freedom of choice for your business. Automation Builder enables you to adapt the tool chain to your needs and workflows. The software is open for your specific product and communication technology to build your distinct solution.
- Automation Builder provides advanced features, further increasing engineering productivity for your automation solutions.
- Freemium license model with high flexibility in using the licenses. Licenses can be activated on PCs, USB license dongles or license servers (including borrowing of licenses for offline use).
- For details please refer to Automation Builder Software Features.

AC500 Library Licenses

| For | Description | Туре | Order code |
|-------------------|----------------------------------|------------------|-----------------|
| all AC500 V2 CPUs | Solar library | PS562-SOLAR | 1SAP195000R0101 |
| all AC500 V2 CPUs | Water library | PS563-WATER | 1SAS030000R0101 |
| all AC500 V2 CPUs | Motion Control library, Extended | PS552-MC-E | 1SAP192100R0102 |
| all AC500 V2 CPUs | Temperature control library | PS564-TEMPCTRL | 1SAS030010R0101 |
| all AC500 V2 CPUs | BACnet library B-ASC profile | PS565-BACnet-ASC | 1SAP195500R0101 |

Delivery includes a single user license, which can be used for creating applications for an unlimited number of CPUs. All library licenses can be installed on engineering PCs, on USB dongles or on Windows Server operating systems. The licenses can be transferred between computers or dongles unlimited times.

AC500 Runtime Licenses

| For | Description | Туре | Order code |
|-----------------------|---|------------------|-----------------|
| all AC500 CPUs | Modbus TCP HA runtime license | PS5601-HA-MTCP | 1SAP195400R0101 |
| all AC500 V3 CPUs | IEC 61850 protocol runtime license (2) | PS5602-61850 | 1SAP195600R0101 |
| all AC500 V3 CPUs | KNX IP protocol runtime license (2) | PS5604-KNX | 1SAP195800R0101 |
| all AC500 V3 CPUs | BACnet protocol B-BC runtime license (2) | PS5607-BACnet-BC | 1SAP195550R0101 |
| all AC500 V3 CPUs | Motion control library runtime license | PS5611-MC | 1SAP192150R0101 |
| AC500 V3/AC500-eCo V3 | Ethernet/IP scanner runtime license for AC500 V3 (1) (for PM5032, PM5052, PM5072 and PM56xx) | PS5613-EIP-S | 1SAP196101R0101 |
| AC500-eCo V3 | Ethernet/IP scanner runtime license for AC500-eCo V3 (1) (for PM5032, PM5052 and PM5072) | PS5613-EIP-S-e | 1SAP196103R0101 |
| AC500 V3/AC500-eCo V3 | Ethernet/IP adapter runtime license for AC500 V3 (1) (for PM5032, PM5052, PM5072 and PM56xx) | PS5613-EIP-A | 1SAP196100R0101 |
| AC500-eCo V3 | Ethernet/IP adapter runtime license for AC500-eCo V3 (1) (for PM5032, PM5052 and PM5072) | PS5613-EIP-A-e | 1SAP196102R0101 |

For using runtime licensed features one license per CPU is required. The license has to be installed on the AC500 V3 CPU either by connecting it to Automation Builder or via Memory card that has been prepared by Automation Builder for license activation.

Further application libraries and examples:

Please check and download further libraries and examples from: www.abb.com/plc Use English language setting, then click on "Application Examples".

Application Examples explain functionality by using e.g. standard Automation Builder libraries and functions in simple examples. They are tested in the described example configuration and functionality only, they come with documentation and are free of charge.

Applications Examples help to minimize valuable programming and testing time for specific applications.

AC500 libraries

The licenses can be transferred between AC500 V3 CPUs unlimited times.

Library features

PS562-SOLAR

Solar tracker solution library

Library for solar tracking applications enabling fast engineering, especially together with ABB's drives and motors

Covers different tracker configurations and different algorithms for accuracy needs

 Control of trackers in parabolic trough, power tower, PV and CPV applications.

Complete library package for different tracking use cases, plug and play:

Example program with detailed explanations and visualizations

- Control of the tracker adaptable to different needs and conditions, to achieve maximum efficiency of installation
- Exact positioning of different axes with the following accuracies:
 - NOAA algorithm 0.03 Grad
- NREL algorithm 0.0003 Grad.
- Input / sensor adaptation
- Communication
- Different actuators / drives control
- All needed modes for simple commissioning and manual operation:
 - Fast and simple calibration of the trackers, offering manual repositioning and fine tuning
 - Safety positions
 - Back tracking.

PS563-WATER

Library supporting the most common functions in many water applications

Flexible data logging options:

- Especially suited for remote communication like GSM/GPRS
- Timestamp in logging

Water solution library

- Integrated variants for simple use with IEC 60870-5-104
- Logging to files: storage capacity only dependent on memory availability
- Flexible log conditions (cyclic, event or tolerance based).

Support for pumping station functions with different operation modes

- Standard multidrive functions (PLC based)
- Advanced functionality together with ABB ACS and ACQ810 drives
- Detailed diagnosis
- $\bullet \ \, {\sf Energy} \ {\sf efficiency} \ {\sf functions} \\$
- Multidrive functions
- · Flow estimation.

Control Panel CP600 support for ACQ810: Fast and simple configuration for pumping stations with reduced programming effort via pre-built visualization screen templates.

Application examples for fast engineering and startup.

PS564-TEMPCTRL

Temperature control library Library packet for advanced temperature control

applications

Includes extended, flexible PID functionality with

- Auto-tune for temperature control
 Enhanced response time and reduced overshoots and oscillations
- Option to optimize control for very different heating and cooling characteristics.
- Enhanced tolerance to thermocouple input noise
- · Normal and standby- setpoints
- Multi-level temperature monitoring and alarms provides flexible operation and protection for machine and process
- Logging enables complete overview of the actual situation and past behavior
- Configurable output timing, synchronization for peak load shaving in multi-zone setups
- Simulation blocks enable off-line setup and pre-test of a new project
- Group-programming

Example projects, including adaptable HMI project for CP600 family, well suited for multi zone and grouped temperature control e.g. in Extrusion:

- Easy to use operator interface
- Provides quick access to setup, monitoring and tuning screens for multiple zones
- Easily extendable to a large number of zones
- Zones: heat-, cool-only or heat-and-cool

License Package (Software is part of Automation Builder)

All AC500 V2 CPUs NOAA: PM554-XX and above NREL: PM573-ETH and above. All AC500 V2 CPUs Logging: PM573 and above. All AC500 V2 CPUs.

ABB Ability[™] Automation Builder

Library features

PS552-MC-E

Motion control library

Library enabling fast and standardized engineering according to PLCopen standard when using ABB's AC500 PLC for motion control, especially together with ABB's motion control Drives.

Covers different motion control options for single and multi-axes motion control applications:

- Drive-Based and PLC-Based motion
- In PLC based interpolation, the position control loop could be closed in the PLC or drive (with synchronized network)
- Single axis, multi-axes and coordinated motion
- Defined Jerk limitation by polynomial interpolation
- Spline interpolation or polynomial interpolation for cam curves, position velocity or acceleration profiles available
- Possible to switch over between different movements and cam curves on the fly
- latch functionality by utilizing fast drive inputs for ACS350, ACS800, ACSM1
- Drive based motion: commands from PLC, drives perform interpolation and control loop
- Supports the new Pulse Train Output module FM562.

PLCopen functions:

- Administrative Function Blocks
- Single axis Function Blocks
- Multi-axes Function Blocks
- Homing Function Blocks
- Coordinated Motion Function Blocks
- Additional ABB specific Function Blocks for further simplification.

PS565-BACnet-ASC

BACNet communication library

This library enables AC500 PLCs to connect OEM or infrastructure applications to BMS (Building Management Systems) or other controllers.

The PS565-BACnet-ASC library enables AC500 to serve as BACnet server device, complying with the B-ASC Device Profile and interfacing control requirements, and acting as hardwired or Modbus-to-BACnet gateway.

It supports BACnet IP (Ethernet) and BACnet MS/TP (serial) networks. The scalable AC500 platform is compatible with the BACnet library starting from eCo PM5x6 with larger memory (~300 objects) up to PM595 (more than 5000 objects).

The very transparent, object-oriented publish and subscribe approach of BACnet allows efficient and well-documented engineering and collaboration of many different parties in large infrastructure projects.

Highlights

- Easy-to-use BACnet communication directly in the CPU
- No coupler or gateways required
- Cost-efficient particularly for OEMs and projects
- Interfacing other non-BACnet devices to BMS.

BACnet for AC500 is BTL approved and certified.

PS573-PCO

Process control objects library

Facilitates the use of AC500 as controller in DCS solutions by providing function blocks for easy integration into the process visualization.

Twelve function blocks are available which cover the following functionalities:

- · Digital and analog setpoints
- Analog measurement with threshold alarm functions
- Valve control
- Motor control with or without variable speed drives
- · Proportional integral controller

The function blocks have an internal interface to the DCS system. Status and control are exchanged with the DCS system via OPC DA. For ABB Ability™ System 800xA an optional object library is available which contains symbols and faceplates that match the function blocks.

License Package (Software is part of Automation Builder)

All AC500 V2 CPUs (options and no. of blocks/ functions and performance will depend on CPU size and memory). All AC500 V2 CPUs, starting from PM5x6 (~300 objects) up to PM595 (>5000 objects)

(No license required)

All AC500 V2 CPUs have an onboard Ethernet interface (number of function blocks and performance will depend on the CPU size and memory).

Runtime license features

PS5601-HA-MTCP

High availability library using Ethernet (Modbus TCP)

Runtime license per CPU to download library into the CPU.

Same philosophy as proven serial/CS31 based library.

Enables hot-standby redundancy and bumpless transfer with standard AC500 CPUs. Supports 3 redundancy levels:

- CPU
- I/O communication
- SCADA communication

Library package containing libraries based on Modbus TCP for field communication and using CI52x communication interface modules as I/O clusters with redundant connection.

Ethernet redundancy based on externally managed switches: Ethernet network can be independent of the redundancy mechanism used.

- Daisy chain in ring configuration of CI52x with MRP as redundancy protocol
- Fast reaction and switchover nearly independent of the number of clusters
- Possibility of integrating other devices e.g.
 ABB drives into the redundancy scheme.

Scalable redundancy, where CPUs can also be placed far away from each other (...kilometers if fiber-optic networks are used).

Includes the AC500 Bulk Data Manager as a tool for efficient configuration and cluster engineering.

 Configuration and export of projects, clusters, modules/parameters, signal names, visualization ("code generation")

Application examples for fast engineering and startup.

PS5602-61850

GOOSE communication

IEC 61850 MMS server and

This runtime license enables the AC500 V3 PLC to connect to substation type equipment (IEDs) or act as IED.

The protocol library and configuration tool are part of Automation Builder. The runtime license is needed for download.

61850 server edition 1 allows:

- sending MMS messages to ensure a safe data communication – no real time support
- publishing and subscribing to GOOSE messages for high priority peer-to-peer data exchange between different servers to ensure a data transmission with minimal delay
- up to 5 client connections per server
- up to 50 entries per dataset
- up to 20 datasets

Automation Builder used as IED configuration

- Import / export of SCL files formats
- ICD IED capability description file
- SCD substation configuration description file
- $\bullet \ \mathsf{CID} \mathsf{configured} \ \mathsf{IED} \ \mathsf{description} \ \mathsf{file} \\$

Basic display options

Highlights

- Wide set of Logical Nodes provided
- Further Logical Nodes can be defined
- Implementation can be programmed freely in IEC 61131.

The IEC 61850 protocol of the AC500 PLC is TÜV certified.

PS5604-KNX KNX IP communication

This runtime license enables the AC500 V3 PLC to connect to KNX IP.

The protocol and configuration options are part of Automation Builder and FW. The runtime license is needed for download.

Support of

- Up to 1000 group objects
- Programming the physical address via ETS
- Downloading the KNX group address linking via ETS

Highlights

- Easy to use KNX communication directly in CPU due to tight ETS5 and Automation Builder integration via DCA
- No coupler or gateways needed
- \bullet Cost-efficient especially for OEMs and projects
- Enables holistic building automation solutions.

Runtime license (Software is part of Automation Builder)

All AC500 V2 and V3 CPUs

All AC500 V3 CPUs

All AC500 V3 CPUs

ABB Ability[™] Automation Builder

Runtime license features

PS5607-BACnet-BC

PS5611-MC

BACnet communication

This runtime license enables the BACnet protocol on AC500 PLCs to connect OEM or infrastructure applications to BMS (Building Management Systems) or other controllers.

The PS5607-BACnet-BC license enables AC500 to act as BACnet server and client device, complying with the B-BC device profile.

It supports the use of BACnet IP (Ethernet) and BACnet MS/TP (serial) (1) networks to be used with the scalable AC500 platform V3 CPUs.

The very transparent, object-oriented publish and subscribe approach of BACnet allows efficient and well-documented engineering and collaboration of many different parties in large infrastructure projects.

Highlights

- Comfortable configuration and editing in the Automation Builder with library support
- Easy-to-use BACnet communication directly in the CPU
- No coupler or gateways required
- Cost-efficient, particularly for OEMs and projects
- Interfacing other non-BACnet devices to BMS.

BACnet for AC500 is BTL approved and certified.

Motion Control library

Runtime license enabling fast and standardized engineering according to PLCopen standard when using ABB's AC500 V3 PLC for motion control.

Covers different motion control options for single and multi-axes motion control applications:

- PLC-based interpolation, the position control loop can be closed in the PLC or drive (with synchronized network)
- · Single axis and multi-axes motion
- Defined Jerk limitation by polynomial interpolation
- Spline interpolation or polynomial interpolation for cam curves, position, velocity or acceleration profiles available
- Possibility for switching over between different movements and cam curves on the fly
- Latch functionality with drive support
- · Virtual axes possible
- Same PLCopen blocks to support different drives, communication networks and control principles
- Application-specific interpolation algorithms can be integrated
- Supports AC500-eCo V3 with Pulse Train Output.

PLCopen functions:

- Administrative Function Blocks
- Single axis Function Blocks
- Multi-axes Function Blocks
- Homing Function Blocks
- Additional ABB-specific Function Blocks for further simplification.

Runtime license (Software is part of Automation Builder)

All AC500 V3 CPUs

All AC500 V3 CPUs

(1) MS/TP in preparation

Productivity features

Object-oriented programming of AC500 V3 CPUs

All essential features of standard object-oriented programming are included in Automation Builder's object-oriented programming:

- Better structured program code with "separation of concerns" and information hiding
- Flexible extensibility by new types of objects (e.g. software representations of new types of drives)
- Reuse of code for defining specialized subclasses (inheritance), reuse of code operating on different implementations of an interface (polymorphism)
- New optimized editors for IEC programming languages
- Continuous Function Chart (CFC) with auto routing of connections between POUs, unrestricted definition and display of the execution order
- Structured Text (ST) with Support for quick editing with extensive support, such as intellisense, grouping, collapsible tree structure, and indented brackets

HMI integration

Synchronization of connection settings and access to tags on the AC500 PLC. $\,$

Drive integration

Seamless integration of ABB Drives connected to AC500 PLCs:

- Common configuration of cyclic data exchange
- Access to the drive via the AC500 PLC no need for point-to-point connections
- Upload, download and offline editing of drive parameters

Integrated configuration of AC500 software features

All required AC500 software features can be selected and configured by Automation Builder, e.g.

- KNX gateway for connecting to building automation devices
- BACnet B-BC object engineering
- IEC 60870 protocol for data exchange with substations
- Time synchronization via SNTP
- Shared variables with other AC500 PLCs

Professional version control – management of the application project

Professional Version Control is an integrated link to the version control system Subversion (SVN). End users can use this tool to manage independently both the complete IEC 61131-3 project version, as well as the individual application objects. End users benefit from automated management of the source code when developing a project in various teams or over a long period of time

Professional static analysis

With static code analysis it is possible to check the source code of AC500 applications based on pre-defined rules and naming conventions. Additional information on potential development problems is revealed and errors can be detected and eliminated before the application will be tested on the PLC. Static code analysis implements more than 100 pre-defined and partly configurable rules.

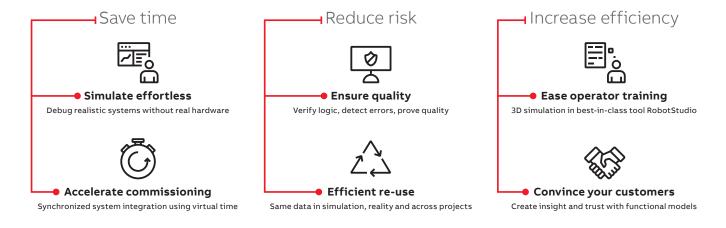

Advanced simulation support

Automation Builder 2.0 has introduced advanced simulation support which allows machine builders and system integrators to simulate and automate all kinds of applications with minimum effort. This gives seamless testing of the complete system at an early stage, even when all the necessary hardware is not yet ready. Even complex systems can be built up quickly and efficiently, ensuring smooth interaction of all the components.

Advanced simulation support lets you build simulation models from virtual devices and manage the virtual time and signal exchange between the virtual devices. Furthermore it provides interfaces to control and manipulate the simulation e.g. via OPC UA, OPC DA or via UDP communication.

Virtual devices emulate real hardware. They function as real hardware, provide signals (onboard, local, fieldbus/remote IOs) and variables. Virtual time lets you control the execution of the simulation. Speed up, slow down or freeze the execution for testing and debugging.

By connecting to external simulation tools (e.g. RobotStudio), additional components can be included to these models. This allows to simulate the real system including physical inputs or actuators. The flexible architecture of the advanced simulation support allows to extend your simulation to more advanced aspects, e.g. the dynamic system behavior.

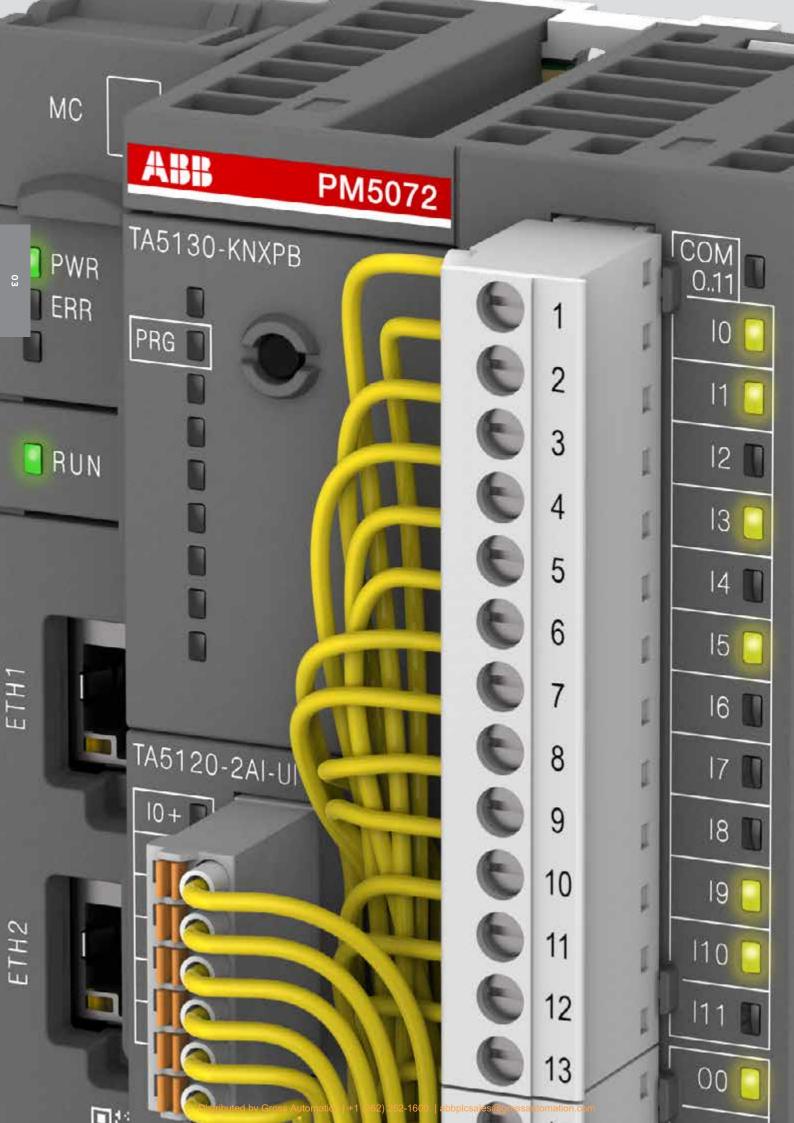

Advanced simulation support – Benefits

Entry level PLC solutions

| 073 | Key reatures |
|-----------------|----------------|
| 074 -081 | Ordering data |
| 082 –096 | Technical data |
| 097 _098 | System data |

Key features

- High performance variant with large memory available
- Simple variant for entry level application

- Up to 10 I/O modules connected to the V2 and V3 Standard and Pro CPU
- Compatible with all standard I/O modules (\$500 and \$500-eCo)
- Digital I/O module with configurable I/O available

- Comprehensive communication and options:
- Up to two Ethernet interfaces for communication and web server for user defined visualization
- Up to three serial ports for decentralized I/O and communication using option boards
- New Ethernet-based communication available

- Up to three different types of terminal blocks available (V2/V3)
- Large number of integrated onboard I/O
- Fast I/O for motion application and axis control
- Onboard I/O extension using option boards for digital or analog channels
- AC versions with integrated power supply (V2), only DC (V3)

Ordering data

AC500-eCo CPUs

- 1 RS485 serial interface (2nd is optional)
- Can be centrally extended with up to 10 I/O modules (standard S500 and/or S500-eCo modules can be mixed)
- Optional memory card adapter for data storage and program backup
- Variants with integrated Ethernet (Ethernet includes web server)
- Minimum cycle time per instruction: Bit 0.08 μs , Word 0.1 μs , Float-point 1.2 μs .

AC500-eCo V3 CPUs

- Three performance classes CPU (Basic, Standard and Pro) with large memory
- From low-entry and cost-sensitive to large and complex applications
- One or two independent Ethernet interfaces with integrated switch functionality
- Up to three RS232 or RS485 serial interfaces using option boards
- Micro memory card slot for data storage and program backup
- Real time clock for Standard and Pro CPU, optional for Basic
- Web server functionality with HTML5 Web visualization for Standard and Pro CPU
- Minimum cycle time per instruction: Bit $0.02~\mu s$, Word $0.02~\mu s$, Floating point $0.6~\mu s$.
- High amount of onboard I/Os with relay or transistor outputs
- Onboard high-speed I/Os with motion control function for up to 4 axis PTO
- Extendable with up to three digital or analog option boards
- Standard and Pro version can be locally extended with up to 10 I/O modules (S500 and/or S500-eCo modules can be mixed)
- 24 V DC power supply.

Terminal block sets are necessary for each AC500-eCo V3. The terminal blocks must be ordered separately.

(3) Memory size of V2 versus V3 CPUs is not comparable. Projects have a different and separate User Program code and Data memory calculation in Automation Builder 2.4.0 version or later: System, configuration and web server parts are not counted anymore. This results in typically about 50 % lower memory usage compared to V2, and even lower memory usage compared to V3 projects compiled in Automation Builder 2.3.0 or before.

| Screw mounting accessory for AC500-eCo V3 CPU (same as PM595-4ETH-x), 20 pieces per packing unit | TA543 | 1SAP182800R0001 | | 0.100 |
| Cable binding pluggable accessory, 20 pieces per packing unit | TA5301-CFA | 1SAP187500R0003 | | 0.150 |
| Option board cover, removable plastic part, 6 pieces per packing unit | TA5300-CVR | 1SAP187500R0001 | | 0.100 |
| Input simulator, 6 switches, 24 V DC | TA5400-SIM | 1SAP187600R0001 | | 0.100 |

(1) For temporary use, e.g. firmware- or project-download to the CPU. Not to be used during vibration or shock.

Ordering data

AC500-eCo V3 option boards

- Up to three option board slots for extension according to CPU type
- All option board modules can be used on all option board slots of a CPU
- Up to three RS232 or RS485 serial interfaces using option boards
- Four different option boards for analog channels extension / Three different option boards for digital channels extension
- KNX push button address switch
- All the option boards are delivered with spring connector terminal block.

⁽¹⁾ Memory size of V2 versus V3 CPUs is not comparable. Projects have a different and separate User Program code and Data memory calculation in Automation Builder 2.4.0 version or later: System, configuration and web server parts are not counted anymore. This results in typically about 50 % lower memory usage compared to V2, and even lower memory usage compared to V3 projects compiled in Automation Builder 2.3.0 or before.

Technical data

FM562 positioning module

The FM562 module contains Pulse Train Outputs for 2 axes. Profile generator for simple motion control tasks are integrated. The RS422 outputs allow a direct connection to Stepper- or Servo drives. Function blocks in PLCopen motion control style allow the integration of the module in an application. These function blocks are contained in the library PS552-MC-E.

Risk of malfunctions and damages to persons!

Unused slots for communication modules are not protected against contact discharge. Dust and Dirt may cause contact problems and malfunctions.

I/O-Bus connectors must not be touched during operation.

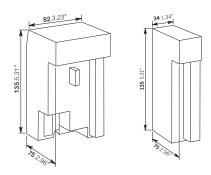

In order to prevent malfunctions, it is recommended that the operating personnel discharge themselves prior to touching communication connectors or perform other suitable measures to reduce effects of electrostatic discharges.

High performance modular PLC

| 103 | Key features |
|-----------------|----------------|
| 104 –117 | Ordering data |
| 118 –147 | Technical data |
| 148 –149 | System data |

Key features

A high performance PLC:

- Large memory up to 160 MB
- Highly modular
- From 8 to +80 000 I/Os
- More communication possibilities (Ethernet, Internet, PROFINET, PROFIBUS, Modbus, CANopen, EtherCAT, Ethernet/IP, BACnet, KNX, OPC UA, OPC DA, IEC 60870-5-104, IEC 61850, MQTT, ...)

 Common AC500 platform benefits: ABB Ability[™] Automation Builder engineering suite,
 I/O modules, scalable and flexible

- Eight programming languages available (five IEC 61131-3, CFC, C-code and C++)
- Object oriented engineering
- Virtual controller
- Web Visu
- Data logging
- Memory card for program back-up
- High Availability (HA) option
- Screw or spring terminal for I/Os
- Extensive programming libraries

Ordering data

AC500 CPUs

- 2 internal serial interfaces, RS232 / RS485 configurable
- Display and 8 function keys for diagnosis and status
- Can be centrally extended with up to 10 I/O modules, 320 I/Os (S500 and/or S500-eCo modules allowed)
- Simultaneous operation of up to 4 external communication modules in any desired combination
- Optional memory card for data storage and program backup
- Can also be used as slave on PROFIBUS DP, CANopen or PROFINET IO using CM582-DP, CM588-CN, CM589-PNIO or CM589-PNIO-4 communication modules
- Ethernet version provides web server and IEC 60870-5-104 remote control protocol
- Support of AC500-S safety PLC.

⁽¹⁾ Provides integrated web server and IEC 60870-5-104 remote control protocol on each interface independently.

⁽³⁾ Only to be used with dedicated terminal base TB523-2ETH.

PM572

PM585-MC-KIT

⁽²⁾ Provides integrated 4 GB flash disk for user data storage and data logging.

Ordering data

AC500 CPU PM595

- 2 Ethernet interfaces with integrated switch and software configurable protocol (PROFINET, EtherCAT or Ethernet e.g. Modbus TCP)
- 2 independent Ethernet interfaces for programming, online access, web server, Modbus TCP, IEC 60870-5-104 protocol e.g.
- 2 serial interfaces, RS232 / RS485 configurable
- Can be centrally extended with up to 10 I/O modules (S500 and/or S500-eCo modules allowed)
- Simultaneous operation of up to 2 external communication modules in any desired combination, no need of additional terminal base

| Program memory MB | Cycle time in µs per instruction min. Bit/Word/Float. point | Integrated communication | Туре | Order code | Price | Weight (1 pce) kg |
|-------------------------|---|---|------------------|-----------------|-------|-------------------------|
| 16 | 0.0006/0.001/0.001 | 2 x Ethernet for fieldbus (2 Ports switch), 2 x Ethernet (1), 2 x serial | PM595-4ETH-F (2) | 1SAP155500R0279 | | 1.050 |

(1) Provides integrated web server and IEC 60870-5-104 remote control protocol on each interface independently.

(2) Provides integrated 4 GB flash disk for user data storage and data logging.

PM595-4ETH-F

Ordering data

Terminal base

- For mounting and connection of the CPUs and communication modules (not needed for PM595)
- 1 to 4 plug-in communication modules
- Connection for communication coupler integrated in the CPU
- I/O interface for direct connection of up to 10 extension modules
- Fieldbus-neutral FieldBusPlug-Slave interface (not for TB523-2ETH)
- Connection COM1: 9-pole pluggable terminal block
- Connection COM2: D-Sub 9 (not for TB523-2ETH).

| Number of coupler slots | Connection for coupler integrated in the CPU | Туре | Order code | Price | Weight (1 pce) |
|-------------------------|--|------------------|-----------------|-------|----------------|
| | | | | | kg |
| 1 | ARCNET BNC | TB511-ARCNET (2) | 1SAP111100R0260 | | 0.215 |

AC500 Condition Monitoring CMS

- PLC integrated condition monitoring and fast protection for high frequency signals (vibration, current, voltage, speed/encoder)
- FM502-CMS module needs function module terminal base TF5x1 for direct interfacing to CPU, communication couplers, other I/O
 - for stand-alone or control/safety integrated condition monitoring
- PM592 CPU to be used on same TF5x1 for data storage and signal processing or communication
 - C-code interface for own complex diagnosis algorithmns, 4GB Flash disk for raw fingerprints and indicator trending
- FM502-CMS module:
 - 16 fast, precise analog inputs, all synchronously sampled; configurable as IEPE or +-10V
 - individual measurement configuration (start, stop, trigger) per channel
 - per channel up to 50ksamples/s and 24bit ADC resolution, adjustable sampling
 - encoder inputs (5V or 24V) up to 300kHz counter; 12 modes, incl. absloute SSI (1MHz)
 - fast data logging, compact WAV-Files delivered automatically to CPU, incl. synchronized encoder signal if configured
 - analogue values always available for fast protection in I/O image of CPU
- Included in ABB Ability[™] Automation Builder: Configuration, libraries for CMS control and wav file handling, examples
- Available download package: Signal processing library, example programs with simple diagnosis, logging and automated triggering (2)

- (1) Ethernet communication provides integrated web server, IEC 60870-5-104 remote control protocol and OPC UA server on each interface independently. (2) In preparation (3) Some communication protocols are licensed see following lines (4) Only to be used with dedicated terminal base TB56xx-2ETH
- (5) Memory size of V2 versus V3 CPUs is not comparable. Projects have a different and separate User Program code and Data memory calculation in Automation Builder 2.4.0 version or later: System, configuration and web server parts are not counted anymore. This results in typically about 50% lower memory usage compared to V2, and even lower memory usage compared to V3 projects compiled in Automation Builder 2.3.0 or before.
- (6) Total user program memory: contains user program code, data (dynamically allocated), web server memory and infrastructure

CI504-PNIO

Hot swap terminal units

For loadless hot swapping of digital and analog extension modules, when used in configurations with communication interface modules or AC500 CPU supporting hot swap. Hot swapping of attached extension module mounted on hot swap terminal unit is supported by AC500 V3 CPU modules as of PM5630-2ETH, AC500 V2 CPU modules as of PM585-ETH, CI501-PNIO, CI502-PNIO, CI541-DP, CI542-DP, CI521-MODTCP and CI522-MODTCP. AC500-S safety I/O modules cannot be used in configurations containing hot swap terminal units. Mixed configurations of hot swap terminal units with normal terminal units for digital and analog extension modules are possible. In the installation hot swap terminal units can be idenfied by the word Hot Swap and a white frame around the connection terminal area.

| (1) In preparation (2) Recommandation | | | | |

⁽¹⁾ In preparation (2) Recommandation

⁽³⁾ Memory size of V2 versus V3 CPUs is not comparable. Projects have a different and separate User Program code and Data memory calculation in Automation Builder 2.4.0 version or later. System, configuration and web server parts are not counted anymore. This results in typically about 50 % lower memory usage compared to V2, and even lower memory usage compared to V3 projects compiled in Automation Builder 2.3.0 or before.

 $⁽⁴⁾ Total user program memory: contains user program code, data (dynamically allocated), web server memory and infrastructure \\ (5) + 1 e.g. for virtual axis \\$

Technical data

CD522 encoder module

The CD522 module offers accuracy and dynamic flexibility for a customized solution. It has two independent encoder inputs onboard and is easily configured using the Automation Builder software for 10 different operation modes and for frequencies up to 300 kHz. The CD522 module also integrates outputs for pulses and for PWM as well as normal inputs and outputs, depending on selected encoder mode.

Analog/digital mixed I/O extension modules

For all modules: max cable length for connected process signals is $1000 \, \text{m}$ for shielded cable and $600 \, \text{m}$ for unshielded ones. For all Input modules, the signal resolution for channel configuration is: -10...+10 V: $12 \, \text{bit} + \text{sign}$; $0...10 \, \text{V}$, $0...20 \, \text{mA}$, $4...20 \, \text{mA}$: $12 \, \text{bits}$.

DC541-CM interrupt I/O and fast counter module

In the operating mode counter, the channels can be configured as follows:

Input, Output, 32-bit up/down counter (uses C0...C3) as a 32-bit counter without limit, 32-bit periodic counter as a 32-bit counter with a limit, limiter for a 32-bit counter (limit channel 0), 32-bit up counter (forward counter) with the frequencies 50 kHz, $5 \, \text{kHz}$ and $2.5 \, \text{kHz}$, pulse-width modulation (PWM) with a resolution of 10 kHz, time and frequency measurement, frequency output.

AC500 Condition Monitoring CMS: FM502-CMS

The FM502-CMS function module offers precision and dynamic flexibility for customized solutions in condition monitoring, precise measurement or fast data logging applications. It has 16 fast, precise and synchronized analog inputs with 50k Samples/s (SPS), 24bit ADC resolution, completed with encoder inputs (incremental or absolute) with counter and additional DI and DC inputs/outputs onboard. It is easily configured using the Automation Builder software and the special libraries. Overall it has 12 different operation modes. One FM502 function module can be placed on the right side of PM592-ETH CPU with a special function module terminal base TF5x1, to interface directly to the CPU. While long measurements can be flexibly configured, started and stopped, all inputs are available in the I/O Image of CPU for immediate use (measurement, protection, control, ...)

Technical data

AC500 communication modules

- Up to 4 communications modules can be used on an AC500 CPU, up to 6 on AC500 V3 CPU.
- No external power supply required.

⁽¹⁾ Plug-in terminal block included. (2) 10 / 100 Mbit/s, full/half duplex with auto-sensing, 2-port switch integrated (3) In preparation

⁽⁴⁾ Only with CAN 2A/2B today

Technical data

Communication interface modules

For all modules: max cable length for connected process signals is 1000 m for shielded cable and 600 m for unshielded ones. For all Input modules, the signal resolution for channel configuration is: -10...+10 V: 12 bits + sign; 0...10 V, 0...20 mA, 4...20 mA: 12 bits. Temperature: 0.1 °C.

WARNING!

Risk of malfunctions and damages to persons!

Unused slots for communication modules are not protected against contact discharge. Dust and Dirt may cause contact problems and malfunctions. Unused slots for Communication Modules must be covered with Dummy Communication Modules ("TA524 - Dummy Communication Module").

I/O-Bus connectors must not be touched during operation.
In order to prevent malfunctions, it is recommended that the operating personnel discharge themselves prior to touching communication connectors or perform other suitable measures to reduce effects of electrostatic discharges.

Key features

All the benefits from AC500 range:
ABB Ability™ Automation Builder engineering suite, I/O modules, scalable and flexible, same high performance communication, libraries and web services

Ordering data

AC500 CPUs

- 2 internal serial interfaces, RS232 / RS485 configurable
- Display and 8 function keys for diagnosis and status
- Can be centrally extended with up to 10 I/O modules (S500) for a total of 320 Digital I/Os or 160 Analog I/Os
- Simultaneous operation of up to 4 external communication modules in any desired combination
- Optional memory card for data storage and program backup
- Can also be used as slave for PROFIBUS DP, CANopen or PROFINET IO using CM582-DP-XC, CM588-CN-XC, CM589-PNIO-XC or CM589-PNIO-4-XC communication modules
- Ethernet version provides web server and IEC 60870-5-104 remote control protocol
- Support of AC500-S safety PLC.

AC500 Condition Monitoring CMS-XC

- PLC integrated condition monitoring and fast protection for high frequency signals (vibration, current, voltage, speed/encoder)
- FM502-CMS module needs function module terminal base TF5x1 for direct interfacing to CPU, communication couplers, other I/O
 - for stand-alone or control/safety integrated condition monitoring
- PM592 CPU to be used on same TF5x1 for data storage and signal processing or communication
 - C-code interface for own complex diagnosis algorithmns, 4GB Flash disk for raw fingerprints and indicator trending
- FM502-CMS module:
 - 16 fast, precise analog inputs, all synchronously sampled; configurable as IEPE or +-10V
 - individual measurement configuration (start, stop, trigger) per channel
 - per channel up to 50ksamples/s and 24bit ADC resolution, adjustable sampling
 - encoder inputs (5V or 24V) up to 300kHz counter; 12 modes, incl. absloute SSI (1MHz)
 - fast data logging, compact WAV-Files delivered automatically to CPU, incl. synchronized encoder signal if configured
 - analogue values always available for fast protection in I/O image of CPU
- Included in ABB Ability[™] Automation Builder: Configuration, libraries for CMS control and wav file handling, examples
- Available download package: Signal processing library, example programs with simple diagnosis, logging and automated triggering (2)

AC500-XC V3 CPUs

- 1x internal serial interface, RS232 / RS485 configurable (ACSII or Modbus RTU Master/Slave)
- 2x independent Ethernet interfaces which can also be used as switch and software configurable protocols like Modbus TCP, MQTT, Ethernet/IP Adapter or Scanner (2)(3), KNX (3) and BACnet B-C (3), IEC 60870-5-104 or IEC 61850 (3)
- Web server with Web Visu HTML5 for use with CP600 with Web interface
- 1x internal CAN interface, with CANopen Master/Slave (2), CAN 2A/2B and J1939 protocols
- Display and 8 function keys for diagnosis and status
- Can be centrally extended with up to 10 I/O modules, 320 I/Os (\$500 and/or \$500-eCo modules allowed)
- · Simultaneous operation of several external communication modules in any desired combination
- To be used exclusivelly with new TB56xx-2ETH
- Optional memory card for data storage and program backup
- To be used only with ABB Ability[™] Automation Builder 2.1 and later
- Support of AC500-S safety PLC.

⁽¹⁾ Ethernet communication provides integrated web server, IEC 60870-5-104 remote control protocol and OPC UA server on each interface independently.

⁽⁵⁾ Memory size of V2 versus V3 CPUs is not comparable. Projects have a different and separate User Program code and Data memory calculation in Automation Builder 2.4.0 version or later: System, configuration and web server parts are not counted anymore. This results in typically about 50 % lower memory usage compared to V2, and even lower memory usage compared to V3 projects compiled in Automation Builder 2.3.0 or before.

Hot swap terminal units

For loadless hot swapping of digital and analog extension modules, when used in configurations with communication interface modules or AC500 CPU supporting hot swap. Hot swapping of attached extension module mounted on hot swap terminal unit is supported by AC500 V3 CPU modules as of PM5630-2ETH, AC500 V2 CPU modules as of PM585-ETH, CI501-PNIO, CI502-PNIO, CI541-DP, CI542-DP, CI521-MODTCP and CI522-MODTCP. AC500-S safety I/O modules cannot be used in configurations containing hot swap terminal units. Mixed configurations of hot swap terminal units with normal terminal units for digital and analog extension modules are possible. In the installation hot swap terminal units can be idenfied by the word Hot Swap and a white frame around the connection terminal area.

Accessories for AC500-XC

| For | Description | Туре | Order code | Price | Weight (1 pce) kg |
|---|---|------------|-----------------|-------|-------------------------|
| AC500 CPUs | Memory card (2 GB) - not to be used for future project | MC502 (1) | 1SAP180100R0001 | | 0.020 |
| | Memory card for high requirements (2 GB), for long term use e.g. data login | MC5141 (2) | 1SAP180100R0041 | | 0.020 |
| | Lithium battery for data buffering | TA521 | 1SAP180300R0001 | | 0.100 |
| I/O modules | Pluggable marker holder for I/O modules, packing unit includes 10 pcs. Template available in the AC500 online help | TA523 | 1SAP180500R0001 | | 0.300 |
| AC500 CPU's, interface module, communication module and I/O modules | White labels, packing unit includes 10 pcs | TA525 | 1SAP180700R0001 | | 0.100 |
| Terminal base | Communication Module, blind cap | TA524 | 1SAP180600R0001 | | 0.120 |
| CPU terminal base | Accessories for wall mounting, packing unit includes 10 pcs | TA526 | 1SAP180800R0001 | | 0.200 |
| | 5-pole power plug for AC500. Spare part. Can be plugged to CPU terminal base TB5x1. Packing unit includes 5 pcs | TA527 | 1SAP181100R0001 | | 0.200 |
| | 9-pole COM1 plug for AC500. Spare part. Can be plugged to CPU terminal base TB5x1 or on TU520-ETH-XC. Packing unit includes 5 pcs | TA528 | 1SAP181200R0001 | | 0.200 |
| Communication modules | 9-pole spring plug for CM574-RS/RCOM. Spare part. Packing unit includes 10 pcs | TA532 | 1SAP182000R0001 | | |
| | 5-pole spring plug for CM575-DN/CM578-CN. Spare part. Packing unit includes 5 pcs | TA533 | 1SAP182100R0001 | | |
| | 2x5-pole spring plug for CM588-CN and CM598-CN. Spare part. Packing unit includes 5 pcs. | TA534 | 1SAP182200R0001 | | |
| | 10-pole spring plug for DC541-CM. Spare part. Packing unit includes 10 pcs. | TA536 | 1SAP183100R0001 | | |
| Protective caps for TB, TU and CM | 10 x Sub-D plastic caps 20 x RJ45 plastic caps, 3 x RJ45 female 10 x M12 plastic caps | TA535 | 1SAP182300R0001 | | 0.300 |
| AC500 CPUs PM595 | Protective cap, spare-parts, Packing unit includes 3 pcs | TA540 | 1SAP182600R0001 | | 0.200 |
| | Lithium battery for real-time-clock buffering | TA541 | 1SAP182700R0001 | | 0.030 |
| | Accessories for screw-mounting, Packing unit includes 20 pcs | TA543 | 1SAP182800R0001 | | 0.100 |

| | | | | |

⁽¹⁾ e.g. CANopen fieldbus: up to 127 stations with I/O from CI module only per station. (2) In preparation, availability on demand (3) Feature is licensed, runtime license per CPU. (4) Total user program memory: contains user program code, data (dynamically allocated), web server memory and infrastructure (5) Memory size of V2 versus V3 CPUs is not comparable. Projects have a different and separate User Program code and Data memory calculation in Automation Builder 2.4.0 version or later: System, configuration and web server parts are not counted anymore. This results in typically about 50 % lower memory usage compared to V2, and even lower memory usage compared to V3 projects compiled in Automation Builder 2.3.0 or before. (6) + 1 e.g. for virtual axis

CD522-XC encoder module

The CD522-XC module offers accuracy and dynamic flexibility for a customized solution. It has two independent encoder inputs onboard and is easily configured using the Automation Builder software for 10 different operation modes and for frequencies up to 300 kHz. The CD522-XC module also integrates outputs for pulses and for PWM as well as normal inputs and outputs, depending on selected encoder mode.

| Туре | | CD522-XC | | | | |
|--------------------------------|--|--|--|--|--|--|
| Functionality | | | | | | |
| Digital inputs/outputs | | 24 V DC, dedicated inputs/outputs can be used for specific counting functions All unused inputs/outputs can be used as input/output with standard specification. | | | | |
| | Input options | Catch/Touch operation, counter value stored in separate variable on external event (rising or falling) | | | | |
| | | Set to preset counter register with predefined value | | | | |
| | | Set to reset counter register | | | | |
| | End value output | Output set when predefined value is reached | | | | |
| | Reference point initialization (RPI) input for relative encoder initialization | • | | | | |
| High-speed counter/encoder | | | | | | |
| Integrated counters | Counter characteristics | 2 counters (24 V DC, 5 V DC, differential and 1 Vpp sinus input) | | | | |
| | Counter mode | one 32 bits or two 16 bits | | | | |
| | Relative position encoder | X1, X2, X3 | | | | |
| | Absolute SSI encoder | • | | | | |

Technical data

Analog/digital mixed I/O extension module

For all modules: max cable length for connected process signals is $1000 \, \text{m}$ for shielded cable and $600 \, \text{m}$ for unshielded ones. For all Input modules, the signal resolution for channel configuration is: -10...+10 V: $12 \, \text{bit} + \text{sign}$; $0...10 \, \text{V}$, $0...20 \, \text{mA}$, $4...20 \, \text{mA}$: $12 \, \text{bits}$.

Technical data

AC500 Condition Monitoring CMS: FM502-CMS-XC

The FM502-CMS-XC function module offers precision and dynamic flexibility for customized solutions in condition monitoring, precise measurement or fast data logging applications. It has 16 fast, precise and synchronized analog inputs with 50k Samples/s (SPS), 24bit ADC resolution, completed with encoder inputs (incremental or absolute) with counter and additional DI and DC inputs/outputs onboard. It is easily configured using the Automation Builder software and the special libraries. Overall it has 12 different operation modes. One FM502 function module can be placed on the right side of PM592-ETH-XC CPU with a special function module terminal base TF5x1, to interface directly to the CPU. While long measurements can be flexibly configured, started and stopped, all inputs are available in the I/O Image of CPU for immediate use (measurement, protection, control, ...)

| | 30 A/m 50 Hz |
| | 30 A/m 60 Hz |

WARNING!

Risk of malfunctions and damages to persons!

Unused slots for Communication Modules must be covered with Dummy Communication Modules ("TA524 - Dummy Communication Module").

I/O-Bus connectors must not be touched during operation.

In order to prevent malfunctions, it is recommended that the operating personnel discharge themselves prior to touching communication connectors or perform other suitable

| measures to reduce effects of elect | rostatic discriarges. | | | |

Key features

Easy integration: Simple extension of ABB PLC with safety functions. One common engineering and diagnostic system for safety and standard CPUs. eXtreme Conditions (-XC) version is available.

Easy implementation of flexible configuration concept (one safety program for various machine types).

Safety CPU can be configured to work even if standard CPU is in STOP mode.

ABB Ability[™] Automation Builder productivity suite providing integrated support of ST, Ladder (LD) and Function Block Diagram (FBD) programming with a common look and feel. Trigonometric functions are supported for easy implementation of complex calculation tasks.

 Both simple and complex safety functions can be easily implemented:

- Safely limited acceleration
- Safely limited deceleration
- Safely limited force
- Safely limited orientation
- Safely limited position
- Safely limited speed
- Safely limited torque.

PROFINET/PROFIsafe interface for decentralized safety I/Os, safe position and speed monitoring as well as triggering of safety drive functions. Configurable real-time exchange of high volume process and safety data between multiple PLC controllers using PROFINET/PROFIsafe.

System data

Operating and ambient conditions

| 24 V DC | Process and supply voltage | 24 V (-15 %, +20 %) |
|--|---|--|
| | Protection against reverse polarity | Yes |
| Allowed interruptions of power supply acc. to EN 61131-2 | DC supply | Interruption < 10 ms, time between 2 interruptions > 1 s |
| Important: Exceeding the maximum p | rocess and supply voltages could lead to unreco | overable damage of the system. The system could be destroyed. |
| Temperature | | |
| Operating | 0 °C +60 °C | horizontal mounting of modules |
| | 0 °C +40 °C | vertical mounting of modules and output load reduced to 50 % per group |
| Storage / Transport | -40 °C +70 °C | |
| Humidity | | |
| Operating / Storage | | Max. 95 %, without condensation |
| Air pressure | | |
| Operating | | > 800 hPa / < 2000 m |
| Storage | | > 660 hPa / < 3500 m |

Creepage distances and clearances

| Insulation Test Voltages, Routine Test, according to EN 61131-2 | AC voltage during 2 seconds |
|---|-----------------------------|
| 24 V circuits (supply, 24 V inputs/outputs), if they are | 350 V |
| electrically isolated against other circuitry | |

The creepage distances and clearances meet the requirements of the overvoltage category II, pollution degree 2.

System data

Power supply units

For the supply of the modules, power supply units according to PELV specifications must be used.

Electromagnetic Compatibility

| Immunity | | |
|---|-------------------|--|
| Against electrostatic discharge (ESD |) | In accordance with EN 61000-4-2, zone B, criterion B |
| Electrostatic voltage in case of air discharge | | ±8 kV |
| | contact discharge | ±6 kV |
| ESD with communication connectors | 5 | In order to prevent operating malfunctions, it is recommended that the operating personnel discharge themselves prior to touching communication connectors or perform other suitable measures to reduce effects of electrostatic discharges. |
| ESD with connectors of Terminal Bas | es | The connectors between the Terminal Bases and CPUs or Communication Modules must not be touched during operation. The same is valid for the I/O-Bus with all modules involved. |
| Against the influence of radiated (CW | / radiated) | In accordance with EN 61000-4-3, zone B, criterion A |
| Test field strength | | 10 V/m |
| Against transient interference voltag | jes (burst) | In accordance with EN 61000-4-4, zone B, criterion B |
| Supply voltage units | DC | 2 kV |
| Digital inputs/outputs | 24 V DC | 2 kV |
| Analog inputs | | 1 kV |
| Against the influence of line-conduct (CW conducted) | ed interferences | In accordance with EN 61000-4-6, zone B, criterion A |
| Test voltage | | 10 V zone B |
| High energy surges | | In accordance with EN 61000-4-5, zone B, criterion B |
| Power supply | DC | 1 kV CM (1) / 0.5 kV DM (2) |
| DC I/O supply, add. DC-supply-out | | 0.5 kV CM (2) / 0.5 kV DM (2) |
| I/O analog, I/O DC unshielded | | 1 kV CM (2) / 0.5 kV DM (2) |
| Radiation (radio disturbance) | | In accordance with EN 55011, group 1, class A |

(1) High requirement for shipping classes is achieved with additional specific measures (see specific documentation).
(2) CM = Common Mode; DM = Differential Mode.

Mechanical Data

| Wiring method / terminals | | |
|---|---|--|
| Mounting | Horizontal (DIN rail mounting) | |
| Degree of protection | IP20 | |

| Against the influence of line-conduct (CW conducted) | ed interferences | In accordance with EN 61000-4-6, zone B, criterion A | | | |
| Test voltage | | 10 V zone B | | | |
| High energy surges | | In accordance with EN 61000-4-5, zone B, criterion B | | | |
| Power supply | DC | 1 kV CM (1) / 0.5 kV DM (2) | | | |
| DC I/O supply, add. DC-supply-o | out | 0.5 kV CM (2) / 0.5 kV DM (2) | | | |
| I/O analog, I/O DC unshielded | | 1 kV CM (2) / 0.5 kV DM (2) | | | |
| Radiation (radio disturbance) | | In accordance with EN 55011, group 1, class A | | | |

⁽¹⁾ High requirement for shipping classes is achieved with additional specific measures (see specific documentation). (2) CM = Common Mode; DM = Differential Mode.

Mechanical Data

| Wiring method / terminals | |
|---|---|
| Mounting | Horizontal (DIN rail mounting) |
| Degree of protection | IP20 |
| Housing | In accordance with UL 94 |
| Vibration resistance acc. to EN 61131-2 | all three axes (DIN rail mounting) 511.9 Hz, continuous 3.5 mm 11.9150 Hz, continuous 1 g |
| Shock resistance | All three axes 15 g, 11 ms, half-sinusoidal |
| Mounting of the modules | |
| DIN rail according to DIN EN 50022 | 35 mm, depth 7.5 mm or 15 mm |
| Mounting with screws | Screws with a diameter of 4 mm |
| Fastening torque | 1.2 Nm |

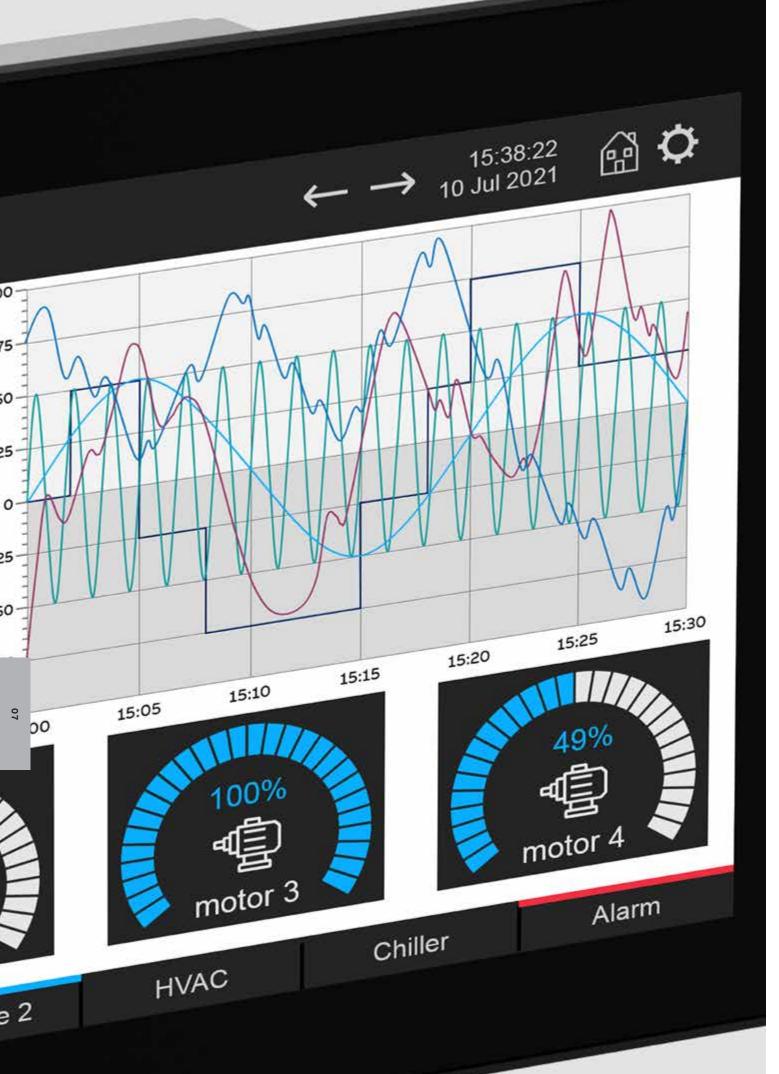

CP600-eCo, CP600 and CP600-Pro

Control panels

213 Key features

214–216 Ordering data

217–219 Technical data

CP600-eCo, CP600 and CP600-Pro

Key features

Various options for tailor made HMI solutions:

- PB610 Panel Builder 600 HMI applications
- Visualization of AC500 web servers (V3)
- Mobile remote access to HMI applications
- PB610-R PC runtime for Windows platforms
- Drivers for integration into automation systems
- OPC UA client and server

CP600

- Brilliant display
- Aluminium enclosure

CP600-Pro

- Multi-touch
- Brilliant real glass screen
- Aluminium enclosure
- Fast ETH 10/100/1000
- Operating temperature: -20...+60 °C
- Five different screen sizes from 5" to 21.5"
- Usable as web panel

CP600-eCo

- Slim design for easy installation even in compact spaces
- Robust plastic enclosure
- Three different screen sizes
- CP610 usable as web panel

CP600-eCo, CP600 and CP600-Pro

AC500 digitalization for a more productive and sustainable future

How to bring your process data safely to your cloud

Secure your site investment with AC500 V3

No matter whether you are managing one small machine or a large site, obtaining clear information is equally important.

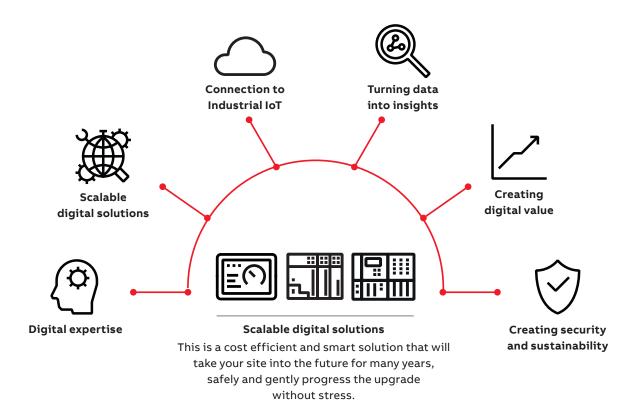

No matter whether there are a few signals or 1000 signals, the AC500 can be adapted easily to exact requirements with secure cloud protocols already from basic PLCs or HMIs.

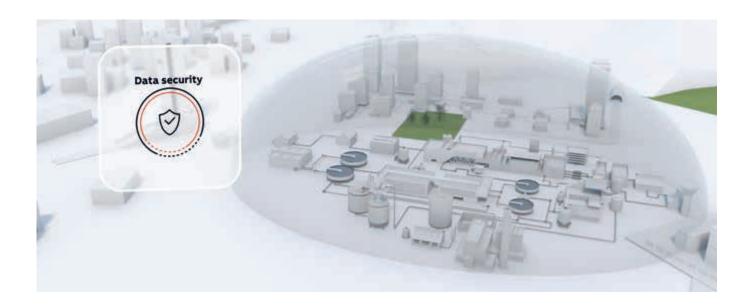

AC500 V3 the perfect data collector

AC500 V3 can easily connect with many different control systems on site.

Since AC500 is not restricted to particular protocols it is easy to find the right protocol or I/O module to receive or send data.

The huge computing capacity of the CPUs allows connection to several hundred systems and sending and/or receiving data via secure protocols such as OPC UA, MQTT to/from any open cloud application.

Digital expertise

ABB Ability™ brings together all of ABB's digital expertise to create real business value for customers.

Scalable digital solutions

From easy connectivity to integrated and optimized services and expertise all the way through to customer support, system analysis, automation and optimization.

Connection to Industrial IoT

Connectivity and software innovation enable real-time, data-driven decisions for safer, smarter and more sustainable industrial operations.

Turning data into insights

Make raw data available for evaluation, present findings in a strategic way and take actions.

Creating digital value

Collect information, make decisions and set priorities on the basis of these findings.

Creating security and sustainability

Certified for "Secure product development lifecycle requirement" as well as secure connections to encrypt data from being exposed.

80

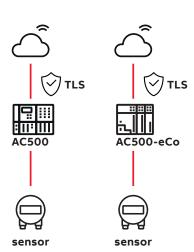

Application descriptions

AC500 as IoT gateway

Cost efficient and extendable solution

- Scalable & platform-independent cloud connectivity
- Adaptable functionality through interchangeable modules
- Smart data handling on edge-level for cost-efficient cloud-solutions

Connection of single controller

Security level: optimized for remote units

AC500 works as edge-gateway and is directly connected to the cloud. Security is established through TLS encryption.

Benefits:

- · No additional gateway required
- Low latency

Application:

Small systems with non-critical data transfer.

Connection of secured network

Security level: advanced

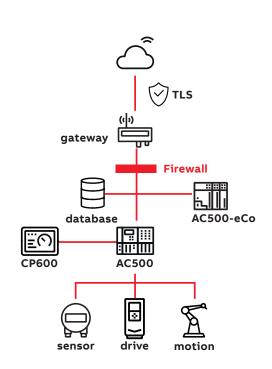

Connection of the whole AC500 network to the cloud using a separate gateway. Enhanced security is provided through additional firewall and/or VPN.

Benefits:

- · Advanced level of security
- Easy integration of many edge devices

Application:

Large systems with many devices which need higher protection.

IoT gateway

Application

Small applications with simple I/Os and direct data transfer (e.g. energy monitoring of radio towers)

Benefits

- Cost-efficient
- · Resource-friendly
- Low implementation effort

TELECOMMUNICATION

IoT Controller Advanced •

Application

Applications with functional safety requirements which need additional functionality (e.g. functional safety control for cranes)

Benefits

· Ensured safety for machines and staff

CRANES

MARINE

IoT data center

Application

Critical assets that need permanent protection & monitoring (e.g. vibration monitoring for pumps)

Benefits

- Permanent asset protection
- Increased resilience to internet outages
- Cost efficient monitoring

WATER

IoT controller

Application

Demanding applications with a larger system architecture and complex data handling (e.g. remote data logging for drives/winch control)

Benefits

- Easy cloud connection of whole system
- Active control of transferred data
- Advanced control functionalities

IEC 61850 protocol for substation and switchboard automation with AC500

AC500 as freely programmable 61850 controller, gateway or IED

AC500 is used as Intelligent Electronic Device (IED), RTU or controller

IEC 61850 is a standard protocol for state-of-the art, future-proof substation automation, which replaces hard wiring of signals by communication over the network. The AC500 V3 can be programmed to act as an Intelligent Electronic Device (IED), RTU or used in control applications such as e.g. load shedding.

Interoperability between devices made easy

Generic Object-Oriented Substation Event (GOOSE) messages are used for the interoperability of devices with minimal delay, e.g. for fast tripping or interlocking or monitoring applications. With the IEC 61850 library and the comfortable communication the AC500 PLC can be used for the publishing of and subscribing to GOOSE messages. The IEC 61850 protocol of the AC500 PLC is TÜV certified.

The AC500 PLC can also act as server for connection-oriented communication according to the Manufacturing Messaging Specification (MMS).

Easy engineering

ABB Ability[™] Automation Builder integrates the IED configuration which supports the import and export of files in the Substation Configuration Language (SCL) and code creation for the AC500. SCL allows transferring configuration information between various IEDs. The functionality of the devices can be programmed in IEC 61131 languages with Automation Builder.

Integral solution

All-in-one platform 60870-104, 61850, Modbus, combined with OPC DA, OPC UA, MQTT.
Automation Builder Engineering with the comfortable IED configuration tool and flexible IEC programming functionality and C-code integration.

Application example 61850

AC500 can precisely control and monitor all levels (switchboard, substation and process) and connect them via 61850 or interface to the outside world (RTU).

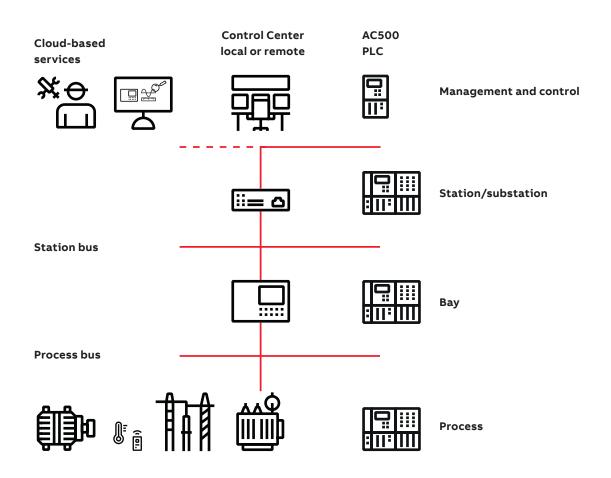

AC500 can interface to a large amount of IEDs and map their data in control and monitoring direction to a 60870-5-104, OPC UA or MQTT communication as required or act on other IEDS e.g with advanced logic in load shedding control applications. AC500 can also help to modernize and digitalize an existing and aging infrastructure.

AC500 application levels

Future-proof building automation with AC500

AC500 as freely programmable building automation controller

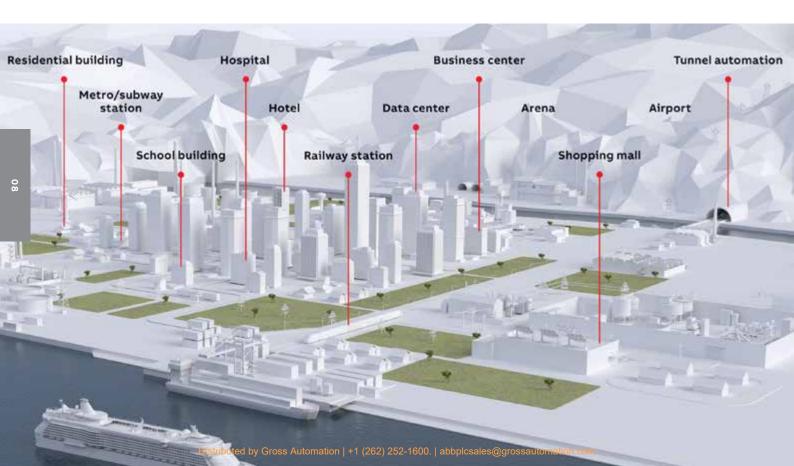

Sustainability and profitability

Connecting the Building Automation Management System via AC500 to central and floor or room level functions guarantees efficient integration and best fit function of critical building systems, securing automation investment for the future. ABB's automation products can include control and monitoring of all up-to-date assets in a building like e.g. solar panels and integrate them to the energy management including e.g. storage and scheduling or shedding of loads. Overall this reduces consumption and maintenance costs, thereby considerably increasing the cost-effectiveness of buildings.

Monitoring and control

In commercial buildings the reliable operation and control of critical functions like doors, access systems, escalators and elevators is important for e.g. a safe and secure operation even in emergency situations. AC500 can also control, monitor and interlock the electrical switchboards as well as all subsystems and their functionality and provides valuable information in case of energy loss on some feeders or malfunction. It can enable monitored and available backup power systems to kick in and service personnel to respond and fix errors rapidly. In case of problems AC500 can manage emergency lighting and provide 24/7 availability to protect people in the building.

Access control and monitoring of charging stations in parking spaces is another asset of AC500 which can be included in the energy management and monitoring locally, remotely or via cloud services.

Central HVAC, room and lighting management

ABB's KNX devices can control heating, cooling and lighting systems at room and floor levels and communicate directly also with central controllers like AC500. Such an integrated system can respond e.g. to sunshine thus ensuring optimal lighting and heating in every room individually, based on detected motion or absence in rooms. CP600 control panels can display the energy consumption of the individual rooms. Local or remote display is possible. With our integral solution, substantial energy savings can be achieved making your investment more profitable.

Reliability and scalability

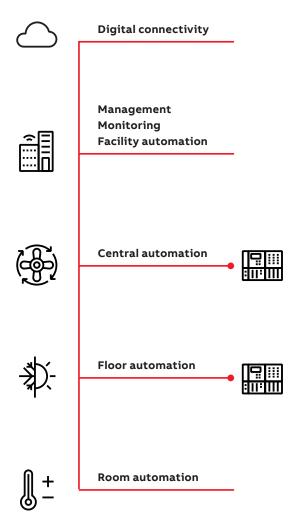

In critical building applications, such as data centers, hospitals, airports or railway/metro stations, reliability of the installed automation solution is key to a safe, productive and cost-efficient operation.

For example in a hospital, reliable function and uninterrupted power supply during surgery are essential for the safety of patients and their treatment. ABB's AC500 addresses these concerns by offering the required special features like multiple communications, high-availability as well as hot swap features. These features are vital to protect surgeons and patients from external impacts causing unforeseen downtime in the operation of the building automation system.

Communication and openness

AC500 as an open communication platform can connect to Building Management Systems or field devices via various protocols, increasing usability, including OPC UA, BACnet (BTL certified) and KNX protocols beneath many others.

With the proven ABB i-bus® KNX system expanded by AC500, it is possible to automate all building automation functions and combine them via BACnet into a single solution with the Building Automation System across all levels.

Building automation with AC500, KNX and BACnet

AC500 as freely programmable controller, gateway or monitoring and visualization device

Use the AC500 PLC and S500 I/O for modular control e.g. for advanced energy efficient, safe and secure operation and monitoring tasks, from small to largest buildings.

Use the AC500 communication capabilities with other fieldbuses and protocols to connect, control and monitor the large portfolio of ABB components such as other low voltage products, ACS drives, motors, substations or connect them with building automation systems and the cloud e.g. with BACnet and OPC UA.

Use the AC500 and CP600 visualization capabilities for powerful local or remote monitoring across all levels.

Use KNX connectivity to add communication capabilities of the proven ABB i-bus® KNX devices like e.g. Dali, M-Bus etc. to the PLC automation level.

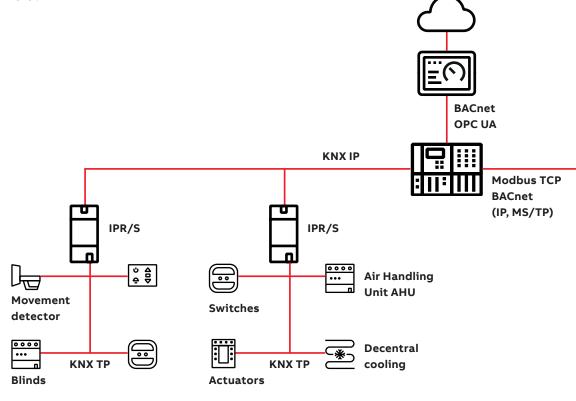

Everything in one system from room to central building functions, based on

- KNX and its efficient engineering by integration of ETS and ABB Ability™ Automation Builder.
- BTL certified BACnet (IP and MS/TP) with comfortable configuration in ABB Ability™ Automation Builder.

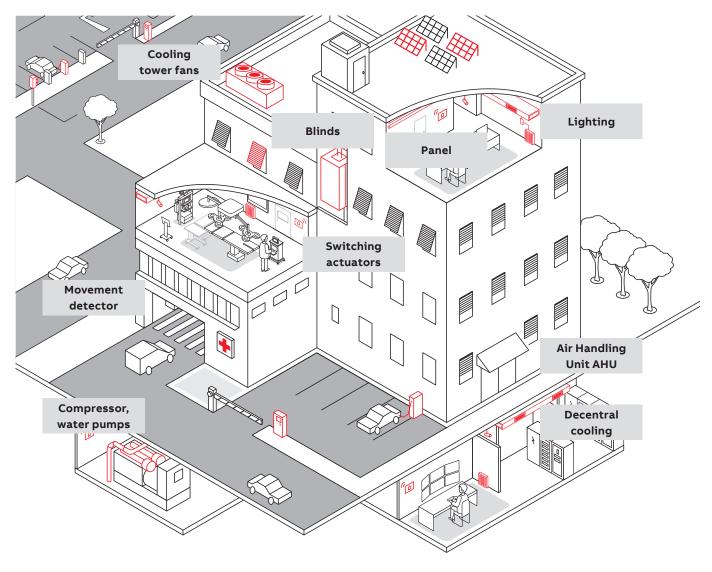

Easy creation and reuse of automation software in building automation by using the IEC 61131 standardized programming languages and library philosophies.

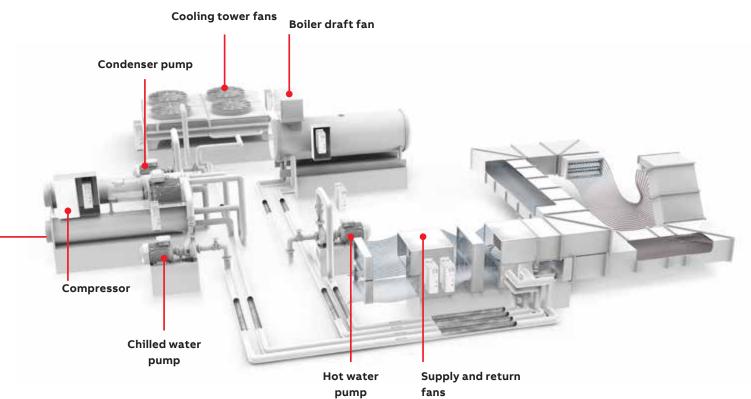

HVAC application

Heating, ventilation and air-conditioning technology is made up of various systems, often spread on room, floor and central levels that can now be integrated into a single system with the same integrated engineering to enable optimization across all levels.

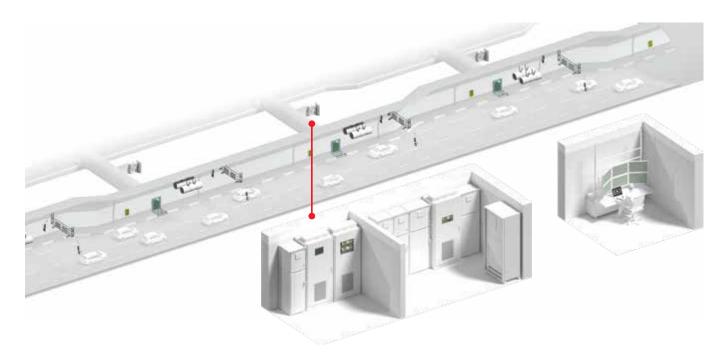

01 Integrated engineering workflow

Tunnel automation with AC500

ABB's core competence is proven by numerous tunnels globally - based on PLCs, HMIs, motors, drives and the ABB Ability[™] Automation Builder integrated engineering suite. They are a perfect fit for tunnel applications, resulting in engineering productivity.

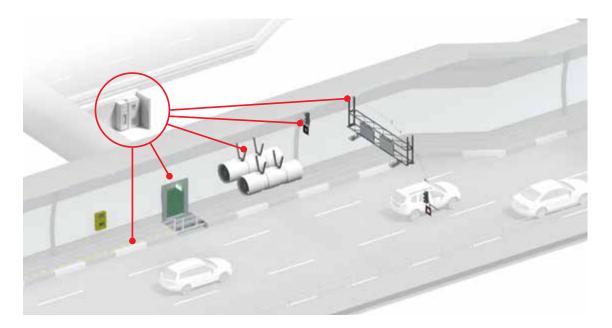

Tunnels are created wherever local conditions do not permit an efficient road or rail routes. They connect people by shortening travel times significantly, protect man and nature from noise and exhaust fumes and make remote areas accessible.

The safety standards for tunnels are regularly reviewed and adapted to the latest findings. New tunnels will be built and equipped on the basis of the most up-to-date and safe technologies and constructions, while older tunnels will have to be upgraded.

ABB offers a portfolio of higher-level control systems (SCADA) which act on top of the local ABB PLC-based architecture. All technical subsystems and field devices of the tunnel system can be controlled and monitored from one or several central locations.

ABB provides an end-to-end portfolio with a high number of scalable products and options, from the field layer right through to the management and visualization layers. This saves significant engineering time and money, while at the same time ensuring a highly available, safe and future-proof tunnel system.

Due to their scalability AC500 PLCs play a key role in tunnel automation. They can be used in all sizes of infrastructure projects ranging up to many tens of kilometers with hundreds of I/O stations distributed over the whole length of the tunnel.

Protection and security

- · Tunnel ventilation to protect people and equipment in every situation
 - Smoke extraction
- Fresh air circulation
- Video and radar control to detect hazardous situations early
- Emergency evacuation system of the entire tunnel providing safe waiting spaces
- · Modern lighting technology for safe navigation and good recognition of vehicles and passengers
- Manual call points along the exit routes
- Firefighting systems

Control and safety

- AC500
 - High availability
 - Safety PLC
- Drives for an optimal integration of the tunnel fans
- Suitable offers of control systems and switchgear
- Power monitoring
- · Low-/medium-voltage distribution systems
- Emergency power supply

Communication and reporting

- Remote monitoring/IoT
- · Remote maintenance
- · General public announcement system
- Communication and notification system accessible from every point in the tunnel
- Optimized traffic flow with data acquisition via AC500
- Signal systems
- Changing traffic signs

Supervision and monitoring

- Local and higher-level control systems (SCADA)
- Dashboards for an overview of the entire tunnel system
- HMI CP600
- Energy management for the complete system
- · Drive systems to efficiently operate tunnel ventilation

www.youtube.com/user/abbplc

AC500 HA offers hot standby redundancy

What are the benefits of AC500 HA for your high availability solution?

- Hot standby: Both CPUs (and all communications) are hot: Permanently running in parallel, continuously synchronizing each other and monitoring the system. If the primary CPU is stopped, powered off or crashed, or if an I/O communication/cable has failed, the other hot standby CPU takes over immediately by adopting primary status.
- Higher resource utilization, no downtimes caused by cabling/hardware/software failure thanks to redundant CPUs and redundant communication to I/O and SCADA/HMI.
- Cost efficiency and easy system maintenance through the use of standard hardware.
- High availability is provided with standard CPUs. Cost matching hot standby quality for small or large systems.
- Scalable in both variants: CS31 redundancy bus or Ethernet.
- Suitable for large distances between redundant CPU (10th of kilometers).

0

Application descriptions

Hot Swap of S500 I/O modules for increased availability

Replacing S500 I/O modules while the system is running

The hot swap terminal units TU516-H, TU532-H and TU542-H allow no-load hot swapping of S500 I/O modules during operation. When replacing a S500 I/O module the other modules in the cluster continue operating.

This capability is available for an I/O cluster with the following fieldbuses:

- PROFIBUS
- PROFINET
- Modbus TCP

Hot swap terminal units can also be used in I/O configurations attached to AC500 CPU modules.

Hot swap terminal units can be mixed with all normal terminal units (except safety terminal units) in the same configuration, when only specific modules need to be hot swapped.

The hot swapping feature is also available for extreme condition variants of \$500.

Permanent wiring

Due to the construction of the S500 system, the wiring remains untouched during hot swap. There is no need to remove terminal blocks.

The S500 I/O module can be removed and replaced while the other modules in the configuration continue operating.

As soon as a module is re-inserted, it will be configured automatically and put into operation.

Applications

Hot swap is needed in hybrid applications when the control system must not be switched off during the replacement of a module.

S500 I/O modules run with various controllers

S500 remote I/O

The availability of different fieldbus communication interfaces makes it easy to use \$500 I/O modules as remote I/O for nearly any PLC and PC. The \$500 remote I/O station consists of a communication interface and I/O modules. The smallest configuration can be just the communication interface with the onboard I/O channels. Communication interfaces are available for the following fieldbuses:

- PROFIBUS
- PROFINET/PROFIsafe
- EtherCAT
- Modbus TCP
- CANopen
- ABB CS31 System Bus

Easy engineering

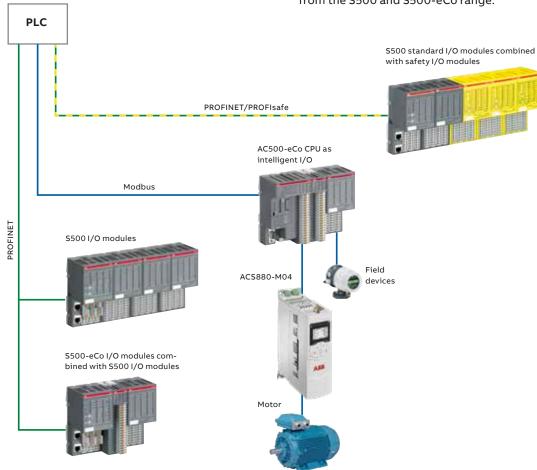

The electronic configuration files that are provided by ABB for different fieldbus systems make it easy to configure the S500 remote I/O station in your engineering tool. The files such as GSD and GSDML are available for download at www.abb.com/plc. For Modbus TCP remote I/O stations a dedicated configurator is included in Automation Builder and for larger applications a Bulk Data Manager tool can be used.

AC500-eCo CPU as S500 remote I/O

When the AC500-eCo compact CPU is used as remote I/O, it can be programmed with Automation Builder for local intelligence while communicating via the open protocols Modbus TCP or Modbus RTU with a CPU that will then be the master of this intelligent remote I/O station. The AC500-eCo CPU can be expanded by I/O modules from the S500 and S500-eCo range.

Third party PLC, IPC or machine controller

Controller can also be an IPC with ABB Ability™ for data center

ö

S500 remote I/O with Modbus TCP

ABB provides a configurator in the Automation Builder tool, which allows the configuration of Modbus TCP I/O stations with the communication interfaces CI521-MODTCP or CI522-MODTCP in the same style as the AC500 configuration. For larger applications a Bulk Data Manager tool can be used. The configuration can be stored in the communication interface, which allows using the configured station with any PLC or PC that supports Modbus TCP. This e.g. allows the use directly on other controllers or monitoring systems as e.g. ABB Ability™ Data Center Automation or external systems.

Thanks to the Modbus feature that allows several masters to exchange data with the same slave, it is possible to use the I/O station as shared devices with up to 10 PLC CPUs.

The Modbus masters can access the process data of the I/O stations in two different ways:

- Fixed mode: each I/O module in the station uses a separate register address range, which requires separate Modbus read/write operations for the modules in the station.
- The dynamic mode allows to pack the data of all I/O modules in the station in one data structure that can be exchanged in one single read/write operation.

S500 remote I/O with PROFINET/PROFIsafe

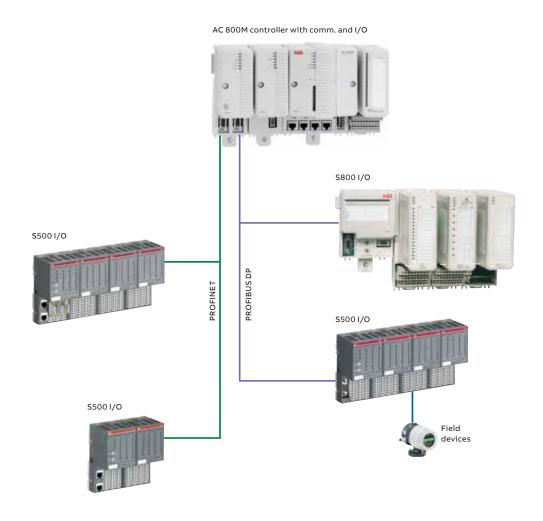

Simply extend your control system with ABB standard and safety I/Os to simplify wiring, reduce operating costs and benefit from the unique features of our safety I/O portfolio to increase the productivity of your machines.

For more information about safety applications, please see application description Embedding safety I/Os in ABB robots on page 250.

S500 in hybrid applications with AC 800M Controller

The communication interfaces for PROFIBUS and PROFINET facilitate the integration of \$500 as remote I/O stations in the System 800xA AC 800M family of controllers. System redundancy is supported with PROFINET. The configuration is integrated into the Control Builder M engineering tool.

Hot swap of S500 I/O modules is possible when these are mounted on hot swap terminal units.

Integration of AC500 PLC into ABB Ability™ System 800xA

Integration of AC500 PLC into System 800xA

The AC500 PLC hardware can be used for automation of process modules while the operator benefits from user experience in System 800xA. Proven libraries are provided for System 800xA and AC500. This allows programming control tasks in the AC500 PLC while System 800xA is the operator interface. For large distributed projects, many AC500 PLCs can be connected to a System 800xA node.

Process Control objects

Twelve objects are available which cover the following functionalities:

- · Digital and analog setpoints
- Analog measurement with threshold alarm functions
- · Valve control
- Motor control with or without variable speed drives
- · Proportional integral controller

Communication between System 800xA and AC500 PLC

Communication between the AC500 function blocks and the objects in System 800xA uses the PLC Connect option of System 800xA and the AC500 OPC Server.

Simplified engineering

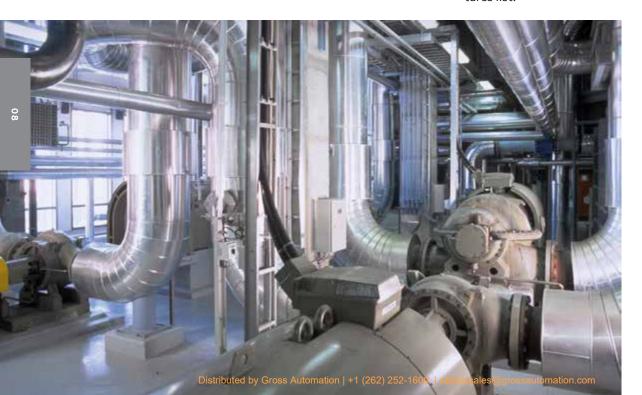

The Process Control Objects (PCO) library for AC500 V2 contains a function block for each object. The control task is engineered with the AC500 engineering tool ABB Ability™ Automation Builder. The communication between the objects in System 800xA and the function blocks in AC500 is configured with Bulk Data Manager, which is part of the System 800xA Engineering toolset. A library with ready-made symbols and faceplates for the objects is available for System 800xA engineering.

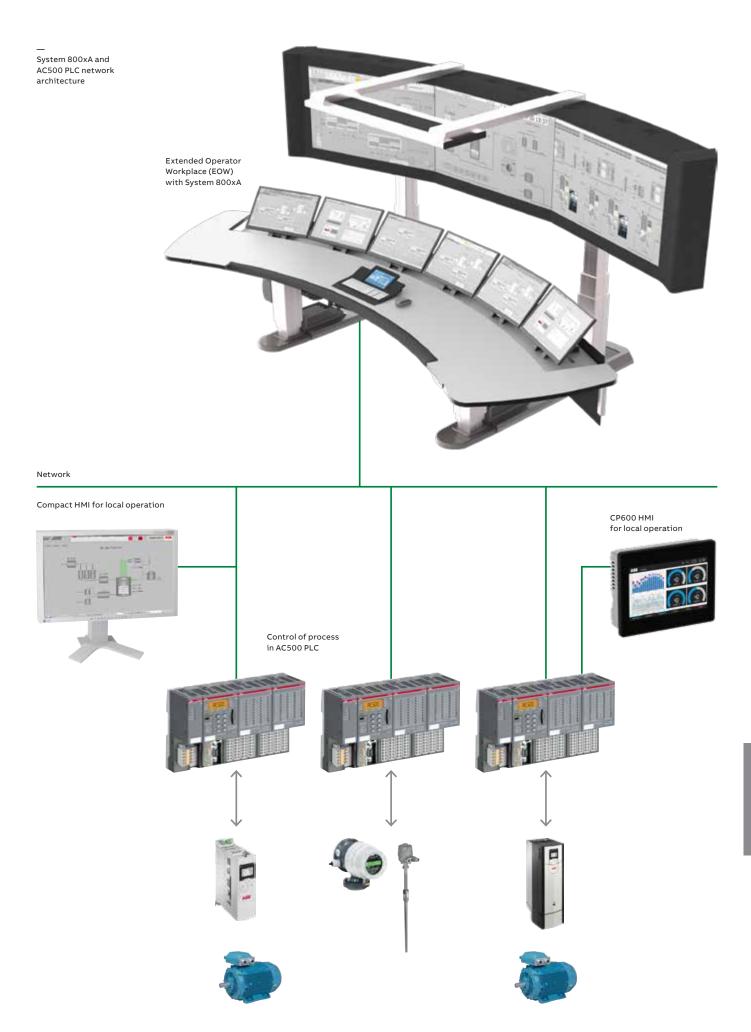

Integrated documentation

For engineering, the function blocks for AC500 include the user documentation. The faceplates provide multi-language support for the text elements and allow adaptation of the color codes of the elements to the preferences of the application.

Availability

The Process Control Objects Library (PCO) for AC500 V2 is available in Automation Builder.
The Automation Builder installation also contains the required OPC server. The corresponding 800xA PLC Object Library for 800xA or Compact HMI can be ordered via the 800xA add-on features list.

Condition Monitoring with AC500 PLC

Controller integrated or stand-alone condition monitoring

The AC500 condition monitoring module FM502 is a natural part of the AC500 platform and ABB Ability™ Automation Builder, and can be used in different condition monitoring concepts, stand-alone or control integrated.

Due to the easy programming in PLC languages, it is usable for a variety of use cases and is especially suitable for plant, line and machine builders as easy extension of their offering.

If controller integrated

- · it enables at very reasonable cost
- the best prediction horizon as it can measure online, when best measurement quality is given without scheduling production interruptions
- while continuously protecting the application in real time e.g. with the same or other sensor(s).
- Further inputs can be used as fast data logger e.g. precisely documenting process quality.

Therefore it is not only able to continually check the mechanical components but also gives fast protection for spontaneous and large failures even while measuring. The condition monitoring mode creates a database internally or externally for predictive maintenance. Automatic and user assisted responses can be enabled to prevent costly consequences including total failures.

As many as 16 vibration sensors + 2 encoder counters can be connected.

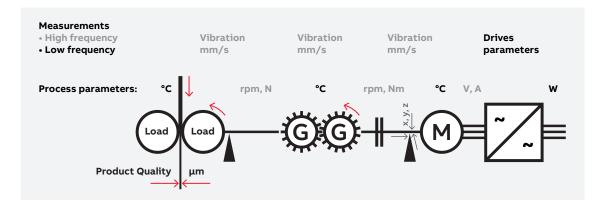

The recorded condition monitoring data can be stored in the CPU flash disk before communication or directly analyzed. Higher level indicators can be calculated and communicated to a local or remote HMI or database system.

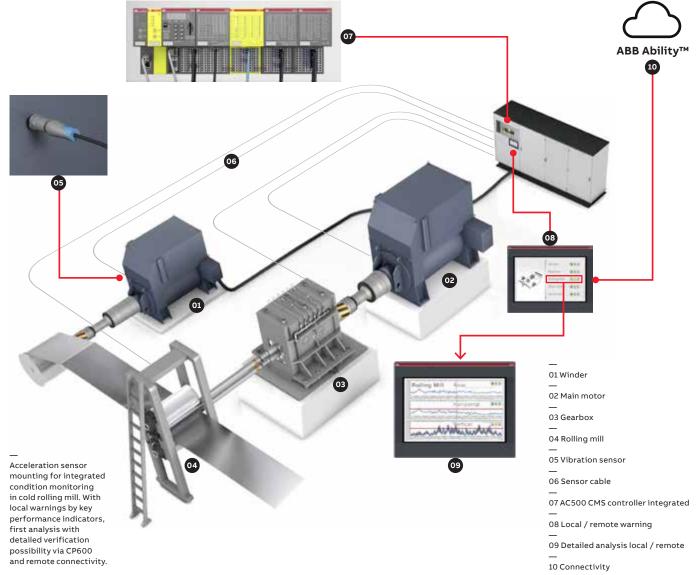

Predictive performance for your process or machines

- Easy and cost saving integration of condition monitoring into the AC500 platform.
- · Early detection of mechanical damages.
- · Fast protection from spontaneous failures.
- Even complex C-code analytics can be used locally for meaningful own performance indicators.
- Leads to optimized planning of maintenance instead of fixed, scheduled service and spontaneous repair.
- No additional system or fixed software for diagnostics and visualization needed.
- Easy storage of the data, locally (4GB) or in remote servers and databases.
- Ideally suited also for retrofit of older equipment, as it can make use of mechanical reserves of still valuable equipment.

AC500 Condition Monitoring module FM502-CM5: Controller integrated or standalone CMS covering a complete drive train.

Example: Cold rolling mill in steel processing:

- One FM502-CMS module can execute differently configured measurements at the same time and can be reconfigured at runtime.
- Several critical und unique components can be protected and condition predicted: Motors, gearbox, process (cold rolling mill).
- Production quality can be logged in parallel in real time.
- Remote diagnostics expertise and detailed analysis and reports only in case of warnings.

Application descriptions

Machine controllers based on AC500 PLC

From simple to high end motion applications

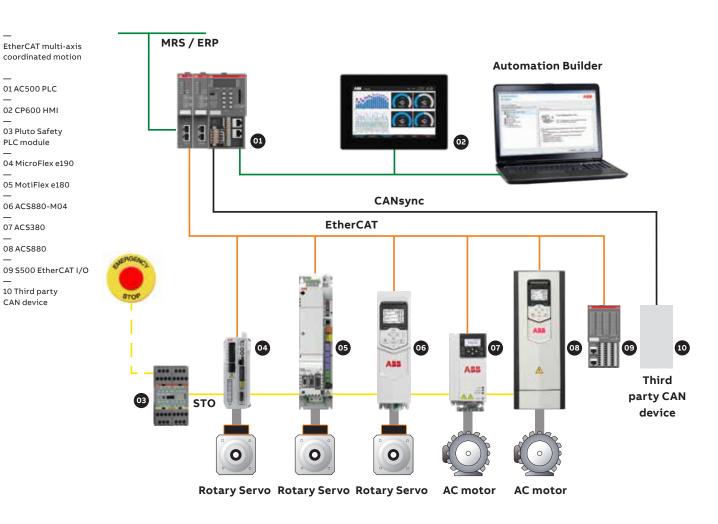

- · Convenient PLC portfolio for diverse applications
 - Simple machine control with AC500-eCo PLC
 - Point-to-point motion with PTO outputs or Modbus communication with the drive
 - Mid-range applications with AC500 PLC
 - EtherCAT communication with the drive or remote I/O and cam-switch for synchronized motion
 - High-end motion application with PM595
 - Axis interpolation e.g. for Delta robot
- · Easy integration and excellent scalability using ABB Ability[™] Automation Builder
- · Motion library for complex applications

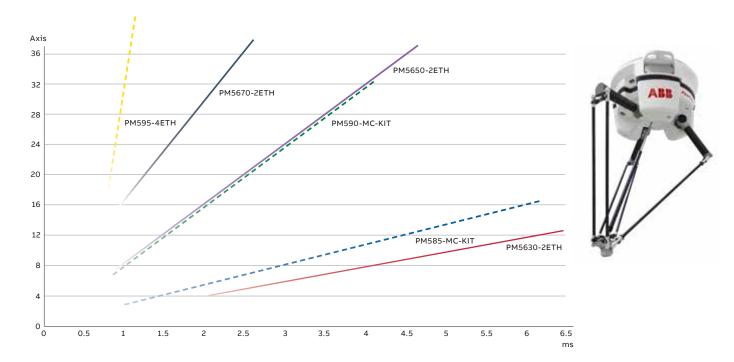

Multi-axis motion coordination with EtherCAT

ABB's AC500 PLC using EtherCAT real-time bus delivers high performance for multi-axis control applications.

The AC500 PLC provides an industry solution with IEC 61131-3 programming and PLCopen motion functions in combination with ABB drives such as ACS880-M04 fitted with the FECA-01 EtherCAT module for higher power axes or ACS380 drives or with MicroFlex e190.

This popular high-performance motion bus provides simple 'daisy chain' connection.

01 Number synchronized Axes / ms

EtherCAT AC500 machine controller kits

In order to simplify your application, ABB offers products for the implementation of machine control or motion control applications. These products can be purchased individually or as a kit. Two available EtherCAT kits contain the components required for your application.

Depending on the required performance, the kit provides a powerful CPU, an EtherCAT master communication module and the respective terminal base. The kit can be expanded using standard I/Os, other communication products or software solutions.

AC500 Machine controller kits

| Program memory kB | Cycle time in µs per instruction min. Bit/Word/Float. point | Integrated communication | Туре | Order code | Price | Weight (1 pce) kg |

⁽¹⁾ Ethernet communication provides integrated web server, IEC 60870-5-104 remote control protocol and OPC UA server on each interface independently.

⁽²⁾ In preparation (3) Some communication protocols are licensed. (4) Only to be used with dedicated terminal base TB56xx-2ETH.

⁽⁵⁾ Memory size of V2 versus V3 CPUs is not comparable. Projects have a different and separate User Program code and Data memory calculation in Automation Builder 2.4.0 version or later. System, configuration and web server parts are not counted anymore. This results in typically about 50 % lower memory usage compared to V2, and even lower memory usage compared to V3 projects compiled in Automation Builder 2.3.0 or before.

Real-time Ethernet functionality

RT-Ethernet modules

Modules are available with two different communication protocols based on Ethernet (PROFINET IO, EtherCAT). Master couplers connect AC500 CPUs to remote I/O modules. Various interface modules offer the connection of decentralized I/O modules to the real-time Ethernet networks.

Cam-switch functionality

Modules based on the decentralized real-time EtherCAT interface technology with integrated I/Os and programmed with PLCopen function blocks are available.

Application descriptions

AC500 as advanced RTU controller

AC500 cloud demo

Advantages of AC500 as RTU

AC500's open system architecture adds value to your applications: In addition to general logic capacity, it offers advanced pre-calculation and communication possibilities. AC500 CPUs and I/O modules fulfill requirements and offer features that are requested in industries where RTU units are used.

As an open communication platform, AC500 is compatible with IEC 60870-5-104, IEC 61850, OPC UA, MQTT and Modbus TCP. Furthermore, Ethernet protocols based on TCP/IP and UDP can be developed by the user. Protocols such as Modbus RTU, ASCII, PROFIBUS and PROFINET, among others, can be used for connection to devices and actuators.

Applications and segments

AC500 has often been named the PLC of choice in the machinery, infrastructure and process industries.

Programming and configuration

The Ability $^{\text{TM}}$ Automation Builder is the one and only tool for programming , configuring and communication.

One tool for the complete PLC Automation product family

IEC 61131-3 compliant

Six programming languages incl. C and C++ for solving complex tasks

A comprehensive set of ready-to-use libraries for time efficiency

Machine safety standards up to SIL3 or PL e can be combined to form an integrated safety solution

Easy to handle with intuitive tools

7 \mathbf{K} consumption, small footprint

Versions for extended operating temperature from -40 °C up to

HTML5 integrated WEB interface

Hot swap, network redundancy

Data collector and concentrator Data logging and data storage

Communication capability Modbus, IEC 60870-5-104, IEC 61850. OPC UA and more

Gateway functionality with telecontrol protocol

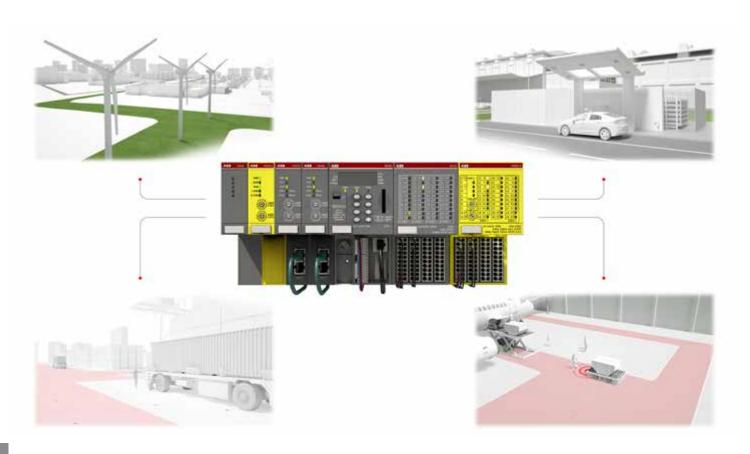

MQTT cloud connectivity

Cryptographic tools and security functionalities

Safer, greener and more productive with AC500-S safety PLC

PLCs with in-built functional safety and fail-safe condition monitoring are the unsung heroes of many renewable installations like wind turbines, electric battery-operated AGVs and hydrogen tank stations.

A safety PLC plays an important role in renewable energy applications

Using programmable logic controllers (PLCs) to control wind turbines or direct solar arrays has been a common solution for many years. What is not yet fully appreciated is the failsafe condition monitoring and advanced functional safety capabilities built within today's PLCs and how they can be applied to renewable applications. Not everyone has grasped the importance that functional safety plays in renewable energy applications and the influential role that a safety PLC can play.

Renewable applications often require complex safety calculations driven by the need to process vast amounts of information to safely supervise the permissible range for temperature, pressure, charge rate, vibration level or position and speed tracking in real-time. Simultaneously, there is a need to safely monitor these complex renewable processes and/or machine characteristics. Ideally placed for this are safety PLCs, with support for trigonometric functions, floating-point calculations, PROFINET/PROFIsafe communication and structured text (ST) for safety programming.

Wind turbines

Wind turbine safety is becoming increasingly important. In many countries, regulations stipulate that safety during wind turbine operation is critical to prevent accidents due to potential wind turbine collapse.

In addition to a state-of-the-art wind turbine safe control, the ABB AC500-S safety PLC with condition monitoring provides fail-safe condition monitoring of vibrations within the turbine's tower. This enables advanced safety functions to be implemented within wind turbines to avoid structural damage which could lead to accidents.

Automated guided vehicles

Airports and harbors are becoming the epitome of green design, with shore-based wind turbines powering, for instance, the charging stations used to replenish electric battery-operated automated guided vehicles (AGVs) transporting goods.

The safety PLCs can restrict battery-operated AGVs to designated areas creating safe zones where workers can move about freely. Unable to enter these restricted areas, safety barriers no longer need to be able to withstand the full-force of an AGV, leading to a more open collaborative environment. In areas where the two must mix, the PLC can take input from the AGV's laser-scanner to safely stop the vehicle if it detects a worker or other object in its path.

The safety PLC provides floating-point calculations and trigonometric functions to implement even the most complex mathematical calculations in real-time. These include safely monitoring restricted safety areas for battery-operated AGVs and collision detection.

Hydrogen tanks

To go further afield, people are increasingly turning to hydrogen fuelled vehicles to provide easy long-distance travel with much lower emissions than with conventional fuel like gasoline, gas, etc. Hydrogen is seen as an alternative to electric vehicles, featuring smaller batteries and generators, yet able to be used for longer distances. The key to this ease is the speed at which a vehicle can refill its tanks with this zero-emission fuel.

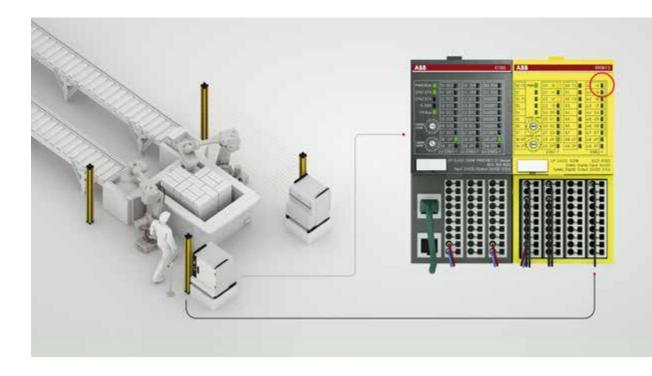

Critical to the safe operation of a hydrogen fuel tank is the need to precisely control the pressure and temperature. The tanks are packed with sensors monitoring these parameters and the PLCs provide fast processing speed to handle the large range of pressure and temperature calculations including safety functions like hydrogen leak detection, smoke detection, high pressure protection of inlet and outlet, etc. The fuelling stations use safety PLCs to precisely monitor the pressure, temperature and tank integrity, whilst providing controlled shut off of the safety valves in the event of a problem.

Please watch our videos on our ABB PLC YouTube channel:

www.youtube.com/user/abbplc

Embedding safety I/Os in ABB robots enhances man-machine collaboration

Integration of safety I/Os

ABB is embedding S500 safety I/Os within its series of robot controllers to improve the flexibility, safety and reliability of collaboration between robots and people, which prevents unnecessary disruption to production. Simply extend your control system with ABB S500 safety I/Os to save wiring efforts, operation costs and use unique features of our safety I/O portfolio to increase your machine productivity.

A light curtain, laser scanner, safety mat, E-stop and acknowledge button, for example, are connected to ABB's S500 safety I/O module, which is integral to the ABB robot controller. Should a human enter the robot's cell to undertake maintenance, the safely-limited speed of the robot can be triggered, if permitted, as opposed to a safe stop. The robot moves very slowly and within

the pre-defined safe work zone using ABB's SafeMove2. Once the human leaves the cell, the robot can resume its faster operational speed with or without acknowledgement, depending on the used safety sensors.

Cost-efficient solution

As the S500 safety I/Os are controlled by the safety module inside the robot controller, there is no need for third party stand-alone safety PLCs to be used. This saves costs as the combination of I/O and robot controller frees up space that would normally be needed for a separate cabinet. It also reduces the time associated with the set-up and operation of robotic production cells. This standardized solution leads to reduced spares, less wiring and lower operational costs as well as easy engineering through common diagnostics.

Enhanced functionality

- More test pulse outputs on S500 safety digital I/O modules ensure higher degree of fault diagnostics and reaction, which results in higher safety integrity level for safety functions in the machine.
- Each safety I/O channel has not only process state LED but also fault-diagnostic LED which significantly simplifies maintenance work and, thus, save your operation costs.
- Extreme condition (XC) modules are available (-40 to +70 °C, high vibration and shock requirements, etc.), which allows cost-savings in engineering and operation.
- Fool-proof protection implemented in all safety I/O modules (reverse signal or power supply polarity, wrong module placement, short circuit etc.), to avoid damaged modules due to wrong wiring.

More flexibility

- A single safety I/O channel can be individually reintegrated, which may provide higher machine availability in many customer cases.
- Front panel rotary switch for PROFIsafe address ensures less maintenance effort because you can see all pre-set PROFIsafe addresses directly looking at the front cover of safety I/O modules (no more need to disassemble safety I/Os).
- Built-in module power supply (no additional 24V DC power supply needed), which makes your power supply connections much simpler.

Please watch our videos on our ABB PLC YouTube channel:

www.youtube.com/user/abbplc

Application descriptions

Safe communication between safety CPUs using PROFINET/PROFIsafe over 5G

01 A modern distribution center comprises several independent systems including conveyor and lift systems, robotic sorting and palletizing processes, together with autonomous guided vehicles, or AGVs, and automated stacker cranes that lift pallets to and from the high bay storage systems. Each system needs to exchange its control and safety data via a central control system or distributed control system in an efficient and reliable manner so as to maintain productivity and minimize downtime.

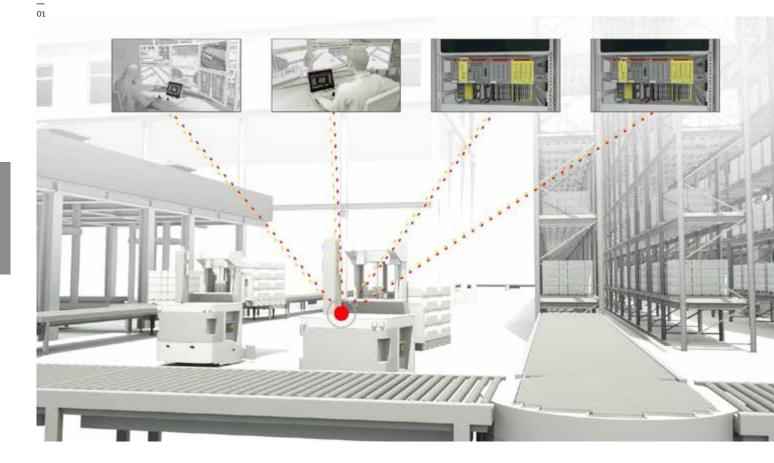

Real-time exchange of high volume process and safety data

ABB has moved from using just one central PLC controller to multiple controllers capable of communicating with many machines in real-time. Now each machine controller can exchange big volumes of process and safety data in real-time to more than one central control system simultaneously. 5G networks can also be used to wirelessly deliver time-critical data using PROFINET/PROFIsafe.

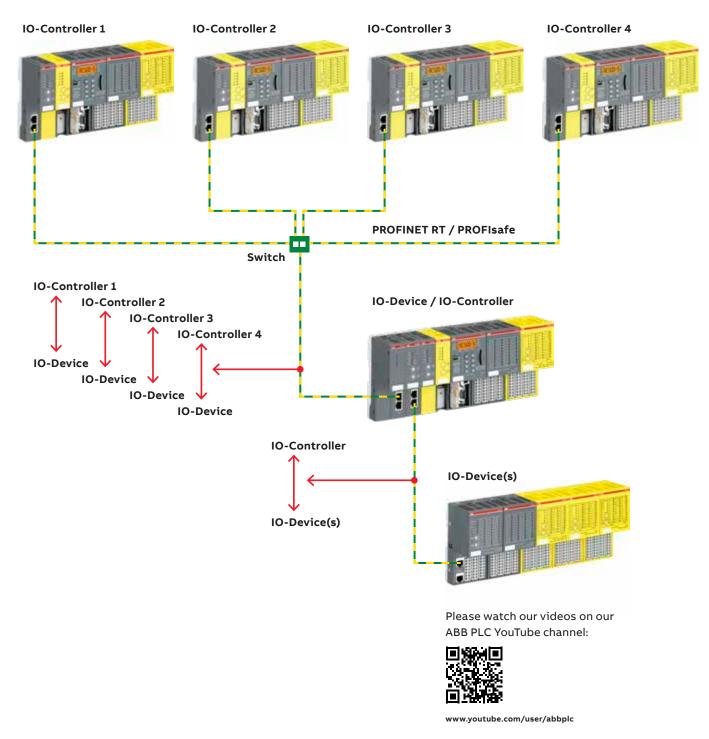

Safety CPU modules SM560-S-FD-1 (-XC) and SM560-S-FD-4 (-XC) can function as both a safety controller and a safety device. The modules, when used with ABB's AC500/AC500-S Programmable Logic Controller (PLC), feature the ability to exchange process and safety data, not only from one controller to multiple devices but also from one device to multiple controllers, using PROFINET/PROFIsafe shared device functionality.

Now hybrid interconnected PLC control systems can extend traditional centralized or distributed control. As such, each controlled machine can deliver high volumes of process and safety data in real-time, simultaneously, to several central control systems.

This solution replaces gateways which are expensive, take valuable control cabinet space and because they are limited to only 12 bytes of safety data per gateway, cannot communicate in realtime with large safety data volumes. With the new solution, a maximum of 1440 bytes of process data including up to 384 bytes of functional safety data can be allocated for up to four PLC controller systems, thereby providing faster reaction to optimize the production and improve the predictive maintenance that leads to less downtime.

PROFINET/PROFIsafe communication between multiple AC500 PLC controllers

Application descriptions

Triggering safety actions using standard HMI

With ABB's AC500-S safety PLC, standard HMIs such as control panels and mobile devices can be used to alter functional safety control functions in industrial applications. ABB has developed a method of using standard human machine interface (HMI) products such as control panels, industrial PCs and mobile devices to reconfigure safety control functions.

Using ABB's AC500-S safety PLC, operators of equipment such as harbor and factory cranes, hoists, elevators, airport passenger bridges, automatic guided vehicles (AGVs), robots, mining and pulp & paper machinery can select, modify and amend their safety control functions. This allows them to achieve functional safety standard requirements while benefiting from the convenience and low costs of using standard HMIs.

Operators of these industrial applications need to reconfigure their safety control functions to adapt to changed application conditions and to optimize machine productivity. These reconfigurations, known as safety actions, are often performed using mechanical or electro-mechanical mode selector switches connected to the digital safety inputs of a safety PLC.

This method suffers from limited user-friendliness, inability to make modifications to switch layout and function, limited number of selection options and relatively high costs for the mode selector switches and digital safety input channels.

ABB solves these challenges by allowing standard HMIs, such as control panels, industrial PCs and mobile devices to interface with an ABB AC500-S safety PLC to carry out these safety actions.

Please watch our videos on our ABB PLC YouTube channel:

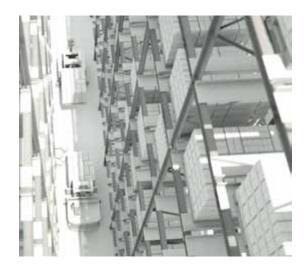

www.youtube.com/user/abbplc

Another example is in the selection of a crane, allowing it to be controlled remotely using the emergency stop located on the operator desk. A network links the AC500-S safety PLC in the control room with the safety PLCs at the cranes. The user in the control room can select, using standard HMI equipment, which of the cranes will stop if the emergency stop button is activated on the remote operator control station. Pressing the remote emergency stop button on the

operator's desk will therefore stop the selected crane only. Independent of the remote emergency stop function, all cranes still have their own local emergency stop controls.

The ability to select from a wide range of HMI products offers the user independence from any one vendor, a larger range of input options and greater flexibility to adapt the connections and layout of the HMIs.

0

Cyber Security

Information

Introduction

Cyber Security is one of the most important topics for ABB and its customers. With the adoption of Industry 4.0 and IoT more and more devices are connected with each other. This is the reason why the security of industrial automation and control systems becomes more and more critical. ABB aims to protect the data, integrity and availability of all AC500 PLC products from I/O modules to the engineering software.

How ABB PLC products meet security challenges

ABB takes all necessary measures to continuously improve the security of its products. These measures follow commonly accepted industry standards and practices and include, where technically feasible:

- Robustness testing, including fuzzing and flooding
- Vulnerability scanning for known vulnerabilities and exploits
- Security testing, including static code analysis or binary code analysis.

We highly recommend that all software, firmware, libraries and applications are kept up to date using the most recent firmware and software updates to keep your system and environment secure.

Before any deployment of standard and functional safety applications with ABB PLC products, an assessment for dangerous threats such as eavesdropping or data manipulation shall be executed. The security measures will depend on the selected security standard for the given application and implemented on the overall system level, for example IEC 62443-3-3 "Industrial communication networks – Network and system security" standard can be used.

TÜV SÜD certification for IEC 62443-4-1

We are pleased to announce that TÜV SÜD has certified the site ABB Automation Products GmbH (APR) in Heidelberg in accordance to the IEC 62443-4-1:2018 standard. The certificate is a confirmation that APR develops secure-by-design products in accordance to the IEC 62443-4-1 process.

Security for industrial automation and control systems - Part 4-1: Secure product development lifecycle requirement certificate.

PLC training and support

Training cases

AC500 training cases help you to get familiar with ABB AC500 PLC offerings and the engineering tool ABB Ability $^{\text{TM}}$ Automation Builder.

For more information, please see https://new.abb.com/plc/training.

01 AC500 training case For details, please see page 117.

02 AC500-S training case For details, please see page 200.

_

| Training cases | Description | Туре | Order code | Price | Weight (1 pce) kg |
|----------------------------------|---|--------------|-----------------|-------|-------------------------|
| AC500 V2 training case | PM585-ETH + TB521-ETH + CM579-PNIO + DA501 + CI502-PNIO + CP6607 + Case + 115-230 V AC power supply + Ethernet cables + demo program + memory card + simulation stand | TA515-CASE | 1SAP182400R0002 | | 7.0 |
| AC500 V3 training case | PM5630-2ETH + TB5620-2ETH + CM579-PNIO + DA501 + CI502-PNIO + CP6607 + Case + 115-230 V AC power supply + Ethernet cables + demo program + memory card + simulation stand | TA5450-CASE | 1SAP187700R0001 | | 7.0 |
| AC500-S safety PLC training case | SM560-S, DI581-S, DX581-S, AI581-S, TU582-S with PM573- ETH and PNIO | TA514-SAFETY | 1SAP182900R0001 | | 10.0 |

AC500-eCo Starter kit

AC500-eCo Starter kit

The AC500-eCo Starter kit helps you to get familiar with ABB AC500 PLC offerings and the engineering tool within a very short time. Learn how to connect and setup the components provided in the starter kit and how to program the PLC by means of several simple example applications. The starter kit comes with CPU, programming cable, digital input simulator and getting started manual. The latest version of the engineering tool Automation Builder is available via download.

Easy to use

The AC500-eCo from ABB is a range of uniquely scalable PLCs offering you unrivalled cost effectiveness for modern industrial automation applications. The AC500-eCo integrates perfectly into the AC500 family - this provides you with the option to build customized solutions based on the standard S500 and S500-eCo I/O range.

Easy to learn

Offering all of the advantages you would expect from the AC500 family of devices, the AC500-eCo delivers an impressive set of powerful programming features. In addition, thanks to the fact that ABB uses a standard IEC 61131-3 based programming system for the entire AC500 family, it is a snap to learn and configure.

Ordering data

Each kit consists of CPU, programming cable and digital input simulator. The engineering tool is available for download at www.abb.com/automationbuilder.

(1) In preparation

Application examples

ABB Ability[™] Automation Builder is the integrated engineering suite for machine builders and system integrators. ABB Automation Builder covers the engineering of ABB PLCs, safety, control panels, drives and motion. The application examples contain programming descriptions for different communication protocols and automation components.

CI52x-MODTCP modules, configuration and communication

This application example describes the configuration (TCP/IP address and parameters) of the CI52x communication interface modules with Automation Builder. The second part describes communication with the configured modules and an AC500 PLC.

AC500 BACnet IP, data exchange between 2 CPUs via the CP600 gateway

This application example demonstrates how to exchange data between PLC A and PLC B where both PLCs act as servers only. The trick is to use a CP600 panel as BACnet gateway. The panel acts as BACnet client.

Cloud connectivity

This application example shows data publishing from AC500 to Microsoft Azure. It is not limited to the AC500 part, but also includes a configuration example of the required Microsoft Azure components.

AC500 PROFINET, configuration and engineering

This application example describes how to configure and setup a PROFINET communication with Automation Builder V2.0.x. The detailed step-by-step instruction shows all necessary steps and describes the relevant parameters which have to be set carefully to establish a reliable and robust PROFINET communication.

The second part of this application example contains general information on e.g. cables, plugs, switches and network topologies which helps you realize your own PROFINET application project.

Use of AC500 CMS filters

This application example explains in an easy to understand way how to filter measured signals in two different ways and calculate the RMS value with the filtered signal.

AC500 license and IP protection for Codesys V2.3 libraries

The license protection of Codesys libraries aims at controlling the use of a library within the engineering context.

For more information, please use our new Application Examples Selector https://new.abb.com/plc/application-examples

Application notes

Triggering safety actions using standard HMI

The application note describes the AC500/AC500-S system configuration, programming approach, safety calculation and requirements for standard HMIs for triggering safety actions using them. Standard HMIs that support at least two different Ethernet-based communication protocols can be used. ABB recommends Modbus TCP and ABB ETH. A mean time between failures (MTBF) greater than 22.5 years is required for standard HMIs to satisfy PL d (ISO 13849-1) requirements. HMIs with lower MTBFs may only satisfy PL c (ISO 13849-1) requirements.

AC500-S safety I/O DX581-S with ABB safety relays BSR23

The application note provides technical details on using the DX581-S safety I/O module with ABB BSR23 safety relays for the potential-free switching of 6 A / 5A (24 V DC / 250 V AC) electrical loads, such as big safety contactors or safety valves by means the AC500-S safety PLC. Typical wiring examples and information related to safety calculations are included. Explanations of using the PLCopen safety FBs delivered with the AC500-S safety PLC in the safety application program to supervise the state of safety relay contacts are provided.

Using DX581-S safety digital outputs with 2A 24 V DC electrical loads

The application note describes how the DX581-S safety I/O module developed for electrical loads with up to 500 mA 24 V DC can be used for switching 2A 24 V DC electrical loads such as big safety power contactors or solenoid valves. Details for wiring, channel configuration and safety calculation are provided.

Cyclic non-safe data exchange between the SM560-S safety CPU and the PM5xx non-safety CPU

This application note describes the project configuration, programming details as well as verification and validation steps for the optional use of cyclic non-safe data exchange via DPRAM between the SM560-S safety CPU and PM5xx. A fast communication and/or transfer of large data volumes (> 84 Bytes) via DPRAM between the SM560-S safety CPU and the PM5xx non-safety CPU is needed in some customer-specific applications such as cranes, hoists, AGVs (automatic guided vehicles), etc. to synchronize process data on both CPUs. The solution described in the application note with SF_CYCLIC_PM5XX_S_SEND and SF_CYCLIC_PM5XX_S_REC FBs allows data exchange with up to 2 kByte of process data between a safety CPU and a non-safety CPU in every program cycle.

AC31 adapter for retrofitting existing AC31 applications

AC500 life cycle management

A long history

During more than 40 years in the PLC business, we have gained experience from hardwired, centralized and distributed PLCs to scalable PLCs. One of our previous product ranges, the AC31 series 90, was succeeded by the AC500 PLC platform.

For the protection of your investments and for ease of migration to the new AC500 PLC generation, ABB provides AC31 adapter modules based on AC500.

The modules have the same footprint, cabling and features as the previous AC31 series 90 products with up-to-date AC500 hardware.

AC31 adapter modules can replace existing AC31 devices with either direct compatible e.g. I/O modules or need adjustments with a new user program for the CPU using Automation Builder software.

Main characteristics and architecture

The connection locations do not differ from the predecessor hardware and the number or type of I/O channels are comparable. For remote I/O products on the CS31 bus, I/Os of an existing field application can be modified without having to change the application or configuration. New modules can be configured with DIP switches.

Replacing the AC31 PLC with the 07KT98-x-AD PLC requires to rewrite the application program using the Automation Builder engineering suite.

Advantages at a glance

- Compatible with the existing AC31 series 90 remote I/O-modules, in some cases with 1-to-1 replacement in the field, no change of application configuration required.
- Footprint identical to predecessor hardware.
- Automation Builder for PLC programming.
- Standard AC500 modules for seamless migration from AC31 to the new AC500.
- Longer life cycle of AC31 through migration to new solution.

Ordering details

For more information, please contact your local sales organization.

AC31 adapter for spare parts

AC500 life cycle management

Under certain conditions, the AC31 adapter I/O modules may be used as spare parts for existing applications where the previous AC31 modules were installed. The AC31 adapter modules can normally replace old modules without any changes in the configuration or application.

The new module is configured with DIP switches, the old one removed, the new one installed and the application started again.

The modules have the same footprint, cabling position and channel assignment. The AC31 adapter module supports most of the previous functionalities of the old module. There are only

a few exceptions and minor differences that are listed below:

- The AC31 adapter I/O modules can only be used, supported and tested with ABB AC31 master devices and cannot run with third party controllers.
- The AC31 adapter modules are based on standard AC500 I/O modules and on a specific electronic base, the modules cannot be purchased separately and are always delivered as complete devices. The pluggable electronic module cannot be replaced separately without the base.

For special applications, further details or specific questions regarding compatibility, please contact your local sales organization.

AC31 adapter

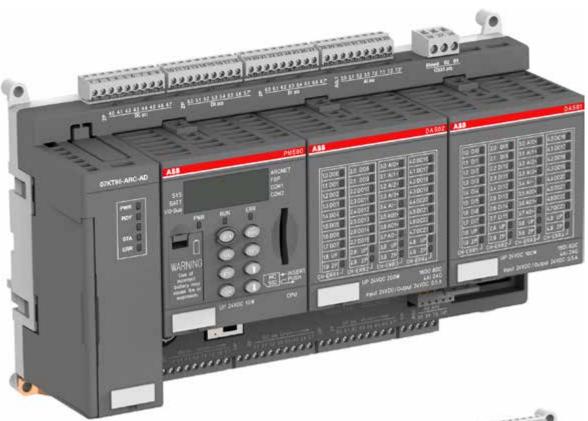

AC500 life cycle management

Replacement table and compatibility information

| Previous AC31 I/O r | nodule | | New AC31 adapter n | nodule | | |
|---------------------|---------------------|--|--------------------|---------------------|---------------------------|--|
| PN | Type designation | I/O combination | PN | Type designation | I/O combination supported | Difference in feature / feature not supported |
| GJR5251400R0202 | 07DC91 | 16DI/8DO/8DC | 1SAP800300R0010 | 07DC91-AD | 16DI/16DC | No local test button, compatible with basic diagnostics only. |
| GJR5252200R0202 | 07DC92 | 32DC | 1SAP800500R0010 | 07DC92-AD | 32DC | Same electrical potential for all channels (no group isolation), input current only max. 2 mA per channel, max. 8 A current sum for all outputs, no local test button, compatible with basic diagnostics only. |
| GJR5251600R0202 | 07AI91 | 8 AI, U/I PT100 and thermocouple | 1SAP800200R0010 | 07AI91-AD | 8AI | Standard analog voltage or current inputs PT100/1000 only up to 3-wire connection, no thermocouple support, linear approximation always on, no test button, only standard as in 07AI91. |
| GJR5252300R0101 | 07AC91 | 16 AC or 8 AI/8 AO | 1SAP800000R0010 | 07AC91-AD | 16AO | No 16 Al inputs but only 16 AO in 16 AC configuration, no local test button, compatible with basic diagnostics only. |
| | | | 1SAP800100R0010 | 07AC91-AD2 | 8AI/8AO | No local test button, compatible with basic diagnostics only. |

New AC31 adapter PLC module

| PN | Type designation | Communication | I/O combination supported | Difference in feature / feature not supported |
|-----------------|----------------------|--|---------------------------|---|
| 1SAP801400R0060 | 07KT98-ARC-AD | ARCNET | 16DI/16DO/16DC/8AI/4AO | Programming using Automation Builder |
| 1SAP801100R0062 | 07KT98-ARC-DP-AD | ARCNET, PROFIBUS DP Master | 16DI/16DO/16DC/8AI/4AO | software means that old AC31 user applications must be re-written and direct |
| 1SAP801200R0062 | 07KT98-ARC-ETH-AD | ARCNET, Ethernet TCP/IP | 16DI/16DO/16DC/8AI/4AO | import of the old program is not possible. |
| 1SAP801300R0072 | 07KT98-ETH-DP-AD | Ethernet TCP/IP, PROFIBUS DP Master | 16DI/16DO/16DC/8AI/4AO | are supported. Only PROFIBUS DP Master |
| 1SAP801500R0062 | 07KT98-ARC-ETH-DP-AD | ARCNET, Ethernet TCP/IP, PROFIBUS DP Master | 16DI/16DO/16DC/8AI/4AO | is supported. Same footprint and I/O channel position as old AC31 07KT98 CPU. |

Services

Pre-purchase

Order and delivery

Installation and commissioning

Operation and maintenance

Upgrade and retrofit

Replacement and recycling

Services offered for ABB's automation products span the entire asset lifetime, from the moment a customer makes the first inquiry to disposal and recycling of the product. Throughout the life cycle of an asset, ABB provides training, technical support and customized contracts, supported by one

Pre-purchase

service networks.

ABB provides a range of services and support guiding the customers to the ideal products for their applications.

of the world's most extensive global sales and

Order and delivery

Orders can be placed at any ABB office or channel partner. In some countries, ABB also offers an online order tracking system. ABB's sales and service network ensures timely deliveries and also offers express delivery.

Installation and commissioning

While many customers have the resources to perform installation and commissioning on their own, ABB and its channel partners also offer professional installation and start-up services if requested.

Operation and maintenance

From maintenance assessments, preventive maintenance, reconditioning of spare parts and repairs on-site or in workshops, ABB has all the options covered to keep their customers' processes operational.

Upgrade and retrofit

Frequently, ABB products can often be upgraded to the latest software or hardware in order to improve the performance of the application. Existing processes can be economically modernized by retrofitting with up-to-date technology.

Replacement and recycling

ABB provides assistance in the best replacement of products while ensuring disposal and recycling observing the local environmental regulations.

Life cycle management

Product life cycle management model

ABB has developed a PLC life cycle management model aimed at providing proactive services for maximizing availability and performance. This model not only provides optimum support to end-users but also a smooth transition to a new product when the PLC has come to the end of its lifetime.

The life cycle management model divides a product's life cycle into four phases: active, classic, limited and obsolete. Each phase has different implications for the end-user in terms of services provided.

Active phase

The active phase starts when the product is launched. In the active phase the end user benefits from different warranty options and other services such as training and technical support. Complete life cycle services from spare parts and maintenance are also provided. The active phase ends when the volume production of a particular PLC ceases and ABB issues an announcement of the life cycle phase change.

Classic phase

ABB PLC users continue to benefit from complete life cycle services throughout the classic phase. The classic phase is closely aligned with ABB's research and development work to provide continuing support for its PLC products while developing future generations. In the classic phase new hardware and software development may be required to provide the maintenance techniques and upgrades needed to guarantee that the PLC continues to operate at its peak performance. Migration to a new PLC product is recommended before the product has entered the limited phase.

Limited phase

In the limited phase the product development has come to its end. Spare parts are available as long as components and materials can be obtained. Towards the end of the limited phase, services gradually become obsolete. In addition to the annual life cycle status reviews, ABB issues a life cycle phase change announcement, half a year prior the product becoming obsolete. This is the last opportunity to transfer to new technology before product services end.

Obsolete phase

The product is transferred to the obsolete phase when it is no longer possible to provide services at reasonable cost or when ABB can no longer support the product technically or the old technology is not available.

Benefits of life cycle management

PLC life cycle management maximizes the value of the equipment and its maintenance investments by:

- ensuring spare parts and ABB competence availability throughout the lifetime
- enabling efficient product support and maintenance for improved reliability
- adding functionality to the initial product by upgrading or retrofitting
- providing a smooth transition to new technology at the end of the product lifetime.

For more information, please see www.abb.com/plc or contact your local sales organization.

ABB Ability[™] Automation Builder product life cycle plan

Product life cycle

ABB is committed to supporting our customers' installed system base. We want to optimize our customers' system investment and provide our customers with the confidence that there is a well-defined support and a path forward for existing ABB systems. ABB's product life cycle policy provides advanced notification of planned changes in product availability and support.

This chapter shall not be understood as legally binding. Users are recommended to keep informed about updates by periodically checking relevant life cycle information.

Predictive releases - continuous delivery

ABB continuously maintains and improves its software products. As part of this effort, we develop and release major versions, minor versions and service releases.

Major and minor releases focus on new features whereas service releases deliver corrections and quality improvements. A new service release supersedes and replaces existing service releases within the same major/minor release. All releases contain corrections to issues either identified in ABB test labs or reported by our customers.

| Release Type | Designation example | Purpose and frequency |
|------------------|---------------------|--|
| Major Release | 1.x, 2.x | Deliver new features extending Automation Builder scope |
| Minor Releases | 1.1.x, 1.2.x | Deliver new features within current Automation Builder scope |
| Service Releases | 1.2.1, 1.2.2 | Deliver corrections, im- provements and updates of existing components |

ABB aims for continuous, consistent and coordinated delivery of engineering tool versions and device firmware versions. It is recommended to always use the latest release of Automation Builder.

Version profiles – compatibility with installed base

ABB aims at maximizing availability and performance of the installed base. In this effort we

follow these two principles: The engineering tool shall provide the latest features in best quality. The engineering tool and installed base shall always be compatible.

To meet these requirements Automation Builder introduced version profiles. A version profile contains all Automation Builder software components as released in the latest service release of a specific major/minor version, including respective device firmware versions.

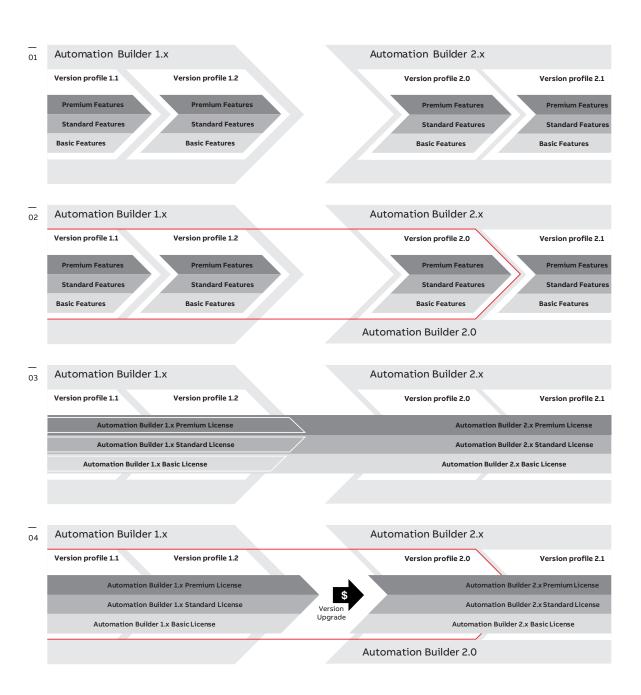

Version profiles can be installed with every release of Automation Builder. Multiple version profiles can be installed in parallel. Each version profile goes through all product life cycle phases. Life cycle statements apply to each version profile and corresponding licenses. The availability of a version profile depends on the life cycle phase it is currently in.

All this allows our users to install the latest version of Automation Builder and keep compatibility with the installed base. Updates of the runtime system are avoided. The latest Automation Builder release always contains the best quality for all profiles. Corrections are distributed via releases and not via hard to track patches.

Automation Builder life cycle management model

The Automation Builder life cycle management model aims to provide service for maximizing availability and performance, support to endusers and a smooth transition to new product versions when the service life of the current product ends. The model divides a product's life cycle into four phases: active, classic, limited and obsolete. Each phase has different implications for the end-user in terms of software and license availability, services and support provided.

| Active | The software product with complete life cycle services is available. |
|----------|--|
| Classic | The software product with complete life cycle services is available for system extensions and spare part engineering. |
| Limited | The software product is available without maintenance and further corrections. Migration to a newer version is recommended. |
| Obsolete | Migration to a newer version is recommended. |

Version profiles and licenses

01 – Major versions come in several minor versions, e.g. Automation Builder 1.x comes as Automation Builder 1.1 and 1.2. Version profiles cover different sets of features, e.g. basic, standard and premium feature sets.

02 – An Automation Builder release contains multiple version profiles, each corresponding to a released minor version. E.g. release Automation Builder 2.0 contains version profile 2.0, 1.2, 1.1 and more.

03 – To use a feature a license is required. The license defines which feature set can be used, e.g. a premium license enables you to use the premium feature set. A license corresponds to a major version of Automation Builder, e.g.

Automation Builder 2.x Premium license enables to use Premium features in all 2.x minor versions and in all previous versions.

04 – There are two different cases where you have to purchase a new Automation Builder license:

- Edition upgrade: Need for a higher value license option within the same major version of Automation Builder, e.g. Automation Builder 2.x Premium instead of Standard.
- Version upgrade: Upgrade from one major Automation Builder version to another, e.g. Automation Builder 1.x to 2.x. – Note: Licenses for Automation Builder 1.x and Automation Builder 2.x can be used in parallel in order to support different version profiles.

0

Additional information

ABB Ability[™] Automation Builder product life cycle plan

Life cycle phases

Active

A newly released version profile of Automation Builder starts in life cycle phase Active. During the Active phase the version profile is available with complete life cycle services.

This means the version profile is available via Automation Builder installation manager from abb.com and will receive ABB's normal product maintenance including enhancements and corrections, and third party software updates.

The version is the base for current sales and active price list. Licenses can be purchased. Support and training is provided.

Classic

With release of the next major/minor version the predecessing version profile is going into life cycle phase Classic. During the Classic phase, the version profile with complete life cycle services is available for system extensions and spare part engineering.

Classic version profiles are available via Automation Builder installation manager from abb.com and will receive corrections only for critical issues. Classic version profiles are typically available as released in the latest respective service release (and additional corrections). New 3rd party products (e.g. OS) are not supported anymore.

Licenses can be purchased. Training is not available anymore. Support is provided.

Limited

During the Limited phase, the version profile is available without maintenance and further corrections. Migration to a newer version is recommended.

This means it is no longer available from Automation Builder installation manager from abb.com, but could be obtained as offline installations via support. Corrections might be available upon request as billable service. New 3rd party products (e.g. OS) are not supported anymore.

Licenses can be purchased. Training is not available anymore. Support is provided.

Obsolete

When entering the Obsolete phase, the version profile is not supported anymore. Migration to a newer version is strongly recommended.

This means it is not available anymore for installation. It will not receive corrections anymore.

Licenses can be purchased. Training is not available anymore. Support is not available anymore.

08

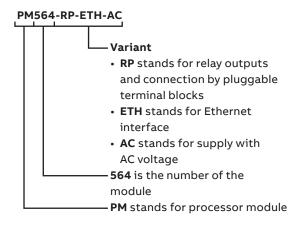

Additional information

Generic composition of type designation

The identification number starts with 5 for the AC500 PLC platform or 6 for the CP600 HMI platform.

Example: AC500-eCo central processing unit

Prefix of module types

| Letters | Meaning |
|---------|---|
| Al | Analog input module |
| AO | Analog output module |
| AX | Analog input/output module (X stands for mixed input/output) |
| CD | Counter module |
| CI | Communication interface module for remote I/O station |
| СМ | Communication module attached to the CPU |
| СР | Control panel (HMI) |
| DA | Mixed analog/digital input/output module |
| DC | Digital I/O module with channels configurable as inputs or outputs |
| DI | Digital input module |
| DM | PLC engineering software ABB Ability™ Automation Builder or add-ons |
| DO | Digital output module |
| DX | Digital input/output module (X stands for mixed input/output) |
| FM | Function module |
| мс | Memory card or memory card adapter |
| РВ | Panel Builder engineering software for HMI |
| PM | PLC CPU module |
| PS | Application-specific function block libraries |
| SM | Safety CPU module |
| TA | Accessories and training cases |
| ТВ | Terminal base for CPU modules |
| TF | Terminal base for CPU with function modules |
| TK | Communication cable |
| TU | Terminal unit for I/O modules |
